CHAPTER-1

INTRODUCTION AND PROJECT BACKGROUND

1.1: Project Background:

IWMP-I project is located mainly in Behjoi Block along with few partial villages of Panwasa and Baniyakhera of Bhimnagar District, U.P. The project is a cluster of 5 Micro watersheds with 2B5A4c1d,2B5A4c1a,2B5A4c2a,2B5A4c2d and 2B5A4c3 being their respective codes. The total project area (geographical) of the watershed cluster is about 9187 ha out of which 6180 ha has been undertaken to be treated under Integrated Watershed Management Program (IWMP) with starting year 2009-10.

5	2B5A4c3	Naglia Kather	4030.00	Sot River
		Total	6180.00	

1.2: Need and scope for Watershed development programme:

Watershed Development Programme is prioritized on the basis of thirteen parameters namely Poverty index, Percentage of SC/ST population, Actual wages, Percentage of small and marginal farmers, Ground water status, Moisture Index, Area under rain fed agriculture, Drinking water situation, percentage of the degraded land, productivity potential of the land, continuity of another watershed that has already been treated, and cluster approach for the area.

Cluster approach has been taken into consideration for micro-watersheds covering a total geographical area of **9187** ha with a cumulative score of **90**.

1.3: Weightage for the selection of the watershed:

Project name	Project type	Weightage													
		I	II	III	IV	V	VI	VII	VIII	IX	X	XII	XII	XIII	Total
IWMP-I	Drought	5.0	5.0	5.0	10.0	5.0	0.0	15.0	5.0	10.0	10.0	5.0	15.0	0.0	90

ix	Degraded land	15	High – above 20 % (15)	Medium – 10 to 20 % (10)	Low- less than 10 % of TGA (5)	
x	Productivity potential of productivity can be the land	15	Lands with low production & where productivity can be significantly enhanced with reasonable efforts (15)	Lands with moderate production & where productivity can be enhanced with reasonable efforts (10)	Lands with high production & where productivity can be marginally enhanced with reasonable efforts (5)	
xi	Productivity potential of productivity can be the land	15	Lands with low production & where productivity can be significantly enhanced with reasonable efforts (15)	Lands with mode rate production & where productivity can be enhanced with reasonable efforts (10)	Lands with high production & where productivity can be marginally enhanced with reasonable efforts (5)	
xi	Contiguity to another watershed that has already been developed/ treated	10	Contiguous to previously treated watershed & contiguity within the micro watersheds in the project	Contiguity within the micro watersheds in the project but non contiguous to previously treated watershed (5)	Neither contiguous to previously treated watershed nor contiguity within the micro watersheds in the project (0)	

Xii	Cluster approach in the plains (more than one contiguous micro-watersheds in the project)	15	Above 6 micro-watersheds in cluster (15)	4 to 6 micro watersheds in cluster (10)	2 to 4 micro watersheds in cluster (5)	
Xiii	Cluster approach in the hills (more than one contiguous micro-watersheds in the project)	15	Above 5 micro-watersheds in cluster (15)	3 to 5 micro watersheds in cluster (10)	2 to 3 micro watersheds in cluster (5)	

The total no. of families under BPL is 3488 out of 9695 household in the project area which is 36% of the total households. Hence a score of 5.0 is allotted.

The total population of SC category is 17438 out of 73004 total population which is 23.88% hence a score of 5.0 is allotted. Rain fed agriculture forms the primary occupation of the watershed due to scant irrigation and ground water availability.

More than 93% of the farmers are small and marginal, hence a score of 10 is allotted. The project area lies in dark block due to over exploitation of ground water, hence a score of 5.0 is allotted. The project area lies in Non DPAP block hence a score of 0.0 is allotted. There is no canal system in the project area/block. Farmers are dependent on rain or life saving irrigation by private tube well for their agricultural activities, hence a score of 15 is allotted.

Since the rainfall received is erratic and irregular, the Moisture index is low and the area is classified under IWMP block.

Some part of land is degraded. The soil is very permeable and production of the land can be significantly enriched with the availability of timely irrigation.

1.4: Details of ongoing watershed program:

Presently, no watershed development program is going on in the watershed.

CHAPTER-2

GENERAL DESCRIPTION OF PROJECT AREA

2.1: Location:

The project area is located mainly in Block Behjoi along with few partial villages of Panwasa block of Bhimnagar district on Moradabad-Agra state highway (SH-51) about in 10 Km surrounding from block Behjoi head quarter. This Watershed cluster includes **51** villages. The livelihood of these people is primarily based on rain fed agriculture, animal husbandry, wage labour, goat keeping, sheep keeping, piggery and poultry.

BASELINE SURVEY AND PARTICIPATORY RURAL APPRAISAL

3.1: Social-Economic Analysis:

IWMP-I watershed project has a total of 9695 household with a population of 73004 (as per base-line survey) out of which 39377 are male and 33627 female. The sex ratio is 854 female to 1000 male. There are 3488 BPL families. The detail of population in each micro watershed is given below:-

3.2: Land Holding Pattern:

The average land holding is about 1.20 ha with lack of irrigation source, so it forces the majority of the farmers to migrate to ensure their livelihood. This affects the demographic profile of the watershed directly.

3.3: Migration:

People migrate around the year depending upon their requirement of money to the other state such as Delhi, Punjab, Haryana. Agricultural labours and construction workers and brick making at kiln. Some people migrate as a labour on monthly basis in different type of Industry such as handloom, twice etc. Situated at different cities Delhi, Punjab, Haryana. The total migration during last year was 1575. The details are given below :

INSTITUTIONAL BUILDING AND PROJECT MANAG EMENT

4.1: Project Implementing Agency

The Project Implementing Agencies (PIA) is selected by state level Nodal Agency (SLNA) for Integrated Watershed Management Program (IWMP) Bhimnagar District of U.P. The PIA is responsible for implementation of Watershed Program. The PIA for IWMP in Bhimnagar District is Bhoomi Sanrakshan Adhikari (BSA), Land Development & Water Resources, Moradabad.

Before the formation of SHGs, PRA activities & Group discussions (GDs) is organized with the help of women, which came up with the following observations:-

- (a) Lack of proper credit facilities due to low intervention of formal financial credit institutions.
- (b) Excessive exploitation of weaker section by money lenders and also Lack of attitude for saving among poor people.
- (c) Lack of Knowledge on credit, thrift activity and banking.

With a detailed discussion identified training institutes, NGOs working in the area it was planned to provide capacity building to SHGs to promote livelihood activities with an aim to women empowerment also.

4.4: Convergence in IWMP-I, Bhimnagar:

CHAPTER-5
MANAGEMENT ACTION PLAN

The details of Preparatory Phase, Work Phase and Convergence Planning are described in subsequent sections.

5.1: Entry Point Activity (EPA):

Entry point activities have been executed with the consent of stake holders and it has helped in winning the confidence of the villagers for moving ahead the other programs of watershed. In total 24 activities have been executed in the project area utilizing Rs. 29.40 Lac.

5.2 Watershed Work Phase:

Following are the major problems of the watershed:-

Moisture stress-Drought conditions
Erosion hazard
Excess runoff
Land degradation
Low fertility of soil
Ground water depletion/Low ground water table
Low cropping intensity
Lack of technical knowledge
Lack of irrigation facilities
Low productivity of crops
Poor availability of drinking water for human as well as animals
Overgrazing
Poor vegetative cover
Heavy infestation of wild animal such as monkeys and Boselaphus(Blue cow)
Poor/low productive breeds of milch animals
Low milk production
Lack of feed & fodder availability
Lack of timber and fuel wood
Lack of proper market facilities
Lack of educational, transportation, medical & health care facilities
Small land holdings
Low income of the households
Lack of employment opportunity
Migration from the project area

Watershed Work Phase Activities Proposed:

The details of Grampanchayat/ Village wise Financial Abstract is given in Table 5.2.

CHAPTER-7

PHASING OF PROGRAMME AND BUDGETING

7.1 Monitoring and Evaluation:

Monitoring of the project will be done at each stage and it will be carried out for both process and outcome. Some community members will be trained and will be involved in participatory monitoring of various parameters and processes and the crop yields. The intervention, expenditure, another information will be displayed in the micro watershed through wall writing. Besides trained community members, PIA/WCDC will also monitor the physical and financial progress of watershed development program. Frontier technologies viz. GIS and Remote Sensing techniques will be used by the PIA/WCDC for monitoring and evaluation. The PIA shall submit quarterly progress reports (countersigned by President of Watershed Committee (WC) to WCDC for further submission to the SLNA. About 1% of the total budget will be used on this activity.

Plan for Evaluation

Watershed development activities bring both tangible and intangible benefits. In order to quantify the benefits, impact analysis has been proposed.

Theme

It is presumed that as a consequence of watershed development activities there will be noticeable change in socio-economic status of inhabitants, cropping intensity, ground water recharge, crop diversification, fuel and small timber availability, livestock composition and milk production etc. These indicators can be gauged over bench mark data both at the beginning and at the end of the project within the watershed.

Observation

The following indicators will be taken into account for quantities and qualities assessment. For the purpose, detailed questionnaires will be prepared and field observation will be carried out.

- Duration of availability of drinking water/irrigation and ground water recharge.
- Irrigation frequency and area under irrigation.
- Changes in cropping pattern and cropping system in the farmers fields along with productivity and incomes.
- Soil health.
- Satellite monitoring for vegetation cover and other parameters.
- Livestock composition and productivity.
- Periodic pest and disease monitoring will be done in major crops.

Physical and financial targets and outlays and year wise breakups are given in Table 7.1.

CHAPTER-8 CONSOLIDATION AND WITHDRAWAL STRATEGY

Success of the program depends on various watershed interventions and sustainability can only be achieved through active participation of community. It will be on capacity building and empowerment of stakeholders. The WC, SHGs, UGs etc. will be on established, trained and strengthened to continue development after withdraw of PIA. By building economic activities through CBOs community participation will be sustained. The PR&D approach along with demand driven interventions will reduce dependency on subsidies. Contribution from the community will be ensured for the entire activities to develop sense of belongingness and the contribution will be deposited to the account of watershed development fund (WDF). It will also be strengthening through donations from the individuals and institutions and the CBOs will be trained to run watershed as business model on sustainable basis. The tangible economic benefits along with empowerment by PIA will empower the CBOs to develop and sustain the watershed activities after withdrawal of the PIA. Community organization will withdraw the money from the WDF to maintain the assets created during the implementation phase.

The consolidation phase will also include:-

1. To prepare the project completion report.
2. Documentation of success stories.
3. Making films, leaflets, bulletins and the lessons learnt.
4. The expenditure will be done as per the common guidelines for watershed development projects.
5. The completion report will reflect the development on following aspects:-
 - a. Productivity enhancement.
 - b. Nutritional Security.
 - c. Risk minimization (Integrated farming system, water harvesting and protected cultivation, value addition and improved marketing).
 - d. Profitability.
 - e. Livelihood security (skill enhancement capacity building, increased employment in agriculture and allied enterprises, reduction in migration etc.).

CHAPTER -9 EXPECTED PROJECT OUTCOME

9.1 Employment Generation and Checking Migration

Employment has always been a problem in the village. The principal occupations of the people are dry land agriculture, animal husbandry and casual labor work. However, rain fall being very limited and erratic, agriculture suffers, i.e. at best they can take only a single crop, which keeps them partially engaged for about 4 months. Lack of fodder makes animal husbandry very difficult too. So, animal husbandry does not keep them engaged full time. Thus the people mainly depend upon casual labor, either in the village itself or outside it. The project plans for creation of both wage employment and self employment opportunities. Wage employment would be created by engaging people in watershed physical works like construction of field bunds, contour bunds, village pond renovation and plantation etc. Self employment would be created by providing the people with cash support in the form of direct livelihood activities like agriculture, animal husbandry and enterprise development. It will be helpful in checking of migration.

PREPARATION OF DPR

Detail Project Report of Integrated Watershed Management Program (IWMP- 1st) Bhimnagar has been prepared through base line/ benchmark survey for physiographic, climate, soil, land use, vegetation, hydrology and socio economic data collection. PRA exercises have been done to collect primary data. Secondary data have been collected from Revenue, Statistics department, Statistical Magazine of the district, department of animal Husbandry development etc. Top sheets on 1:50,000 scale, online high resolution satellite image and SRTM data has been used. Suggestions related to technical & specific inputs were taken from external expert in preparation and drafting of detail project report.
