

DPR OF DHAMPUR WATERSHED (IWMP-V), DISTRICT BIJNOR

Prepared by:

**State Institute of
Rural Development
(SIRD), Lucknow,
U.P.**

2011-2012

Detailed Project Report DPR of Dhampur Watershed, Bijnor District, Uttar Pradesh

INDEX

Chapter	Contents	Page No.
	Foreword	i
	Message	ii
	Acknowledgement	iii
	Executive Summary	iv
1	Introduction and Background	
1.1	Background of IWMP	01
1.5	Watershed – Dhampur, Bijnor	02
2	Objectives and Project Implementing Agency (PIA)	
2.1	Major objectives	04
2.2	Project Implementing Agency (PIA)	04
3	Present scenario of the watershed	
3.1	General profile of the watershed	05
3.2	Village wise land use of the watershed	07
3.3	Watershed maps	13
3.3.1	Base map	13
3.3.2	Slope map	14
3.3.3	Contour map	15
3.3.4	Drainage map – Seasonality	16
3.3.5	Drainage map - Stream order map	17
3.3.6	Soil Map	18
3.3.7	Land Capability Map	19
3.3.8	Land degradation map	20
3.3.9	Landuse Map	21
3.3.10	Ground water level map	22
3.4	Climate	24
3.5	Natural calamities	24
3.6	Physio-graphy and Soils	25
3.7	Hydrology	27
3.8	Human population	28
3.9	Literacy rate	31
3.10	Socio-economic aspects	34
3.11	Details of farming community, land less families and families below poverty line	34
3.12	Details about social categories of farmers	37
3.13	Details about social categories of farmers based on gender	39
3.14	Details about occupation	43
3.15	Details about land holding	47
3.16	Details about livelihood activities	49

3.17	Details about fuel used for cooking meal	51
3.18	Details of migration	53
3.19	PRA (Participatory Rural Appraisal)	57
3.20	List of agencies/projects/schemes presently working in the watershed	57
3.21	Peoples Institution	57
3.22	List of UGs formed	57
3.23	List of members of the Watershed Committee (WC)	58
3.24	Gram Panchayat wise area under different crops	64
3.25	Existing Engineering Works	67
3.26	Details of Common Property Resources (CPR)	68
3.27	Existing package of practices of crops	70
3.28	Existing crop rotation	71
3.29	Existing Package of practices of orchard	72
3.30	Livestock population	73
3.31	Average productivity of field crop /animal	76
3.32	Animal productivity	76
3.33	Existing avenue trees in the Gram Panchayat	78
3.34	Existing Grasses in the Gram Panchayat	79
3.35	Status of existing farm machinery and equipments	79
3.36	Bench marking of project area	81
4	The problems and need of the area	
4.1	Crop productivity/soil and land degradation and soil and water conservation problems	84
4.2	Socio-economical problems	86
4.2.1	Details of SWOT analysis	87
4.2.2	Details of gap analysis	90
5	Recommended management programme	92
6	Proposed interventions	
6.1	Soil management and landuse	93
6.2	Efficient use of water resources and management	93
6.3	Seed and planting material	94
6.4	Technology Dissemination	95
6.5	Farm mechanization	96
6.6	Horticulture	96
6.7	Commercial fruits	98
6.8	Proposed intervention for livestock	99
6.9	Works under Production system	101
6.9.1	Proposed grampanchayat wise area under demonstration (ha)	101
6.9.2	Cost of Crop production system intervention	104
6.9.3	Area under horticulture system	107
6.9.4	Farm mechanization	109

6.9.5	Proposed cropping intensity	113
6.9.6	Animal production system related work (with MGNREGA convergence)	115
6.10	Livelihood activities	117
6.10.1	Non-farm based livelihood activities	117
6.10.2	On-farm based livelihood activities	120
6.11	Soil and water conservation work under NRM	122
6.11.1	Detail dimensions of soil and water conservation works under NRM	122
6.11.2	Cost of Soil and water conservation works under NRM	125
6.12	Gram Panchayat wise proposed EPA activities	129
7	Benefit and cost	
7.1	Net benefit in future	131
7.1.1	Proposed net benefit in future from cropping system	131
7.1.2	Present and future production and value of horticulture system	134
7.1.3	Production and profit from major animal /live stock	138
7.1.4	Net profit of the system through various interventions	140
7.1.5	Gram Panchayat wise cost of project under IWMP	142
7.2	Funds received to Watershed Development Fund (WDF)	145
7.3	Cost : Benefit Analysis (NPV, BC Ratio and IRR)	145
8	Convergence	
8.1	Gram Panchayat wise proposed convergence	146
9	Phasing of the works	
9.1	Physical Phasing	149
9.2	Financial Phasing	152
10	Consolidation and post-project management	
10.1	Activity of consolidation and post project management phase	159
10.2	Adoption of eco-friendly conservation measures	159
10.3	Participation of local community in development and management	159
10.4	Institutionalization for post project management	160
10.4.1	Watershed level committee	160
10.4.2	User Group (UGs) and Self Help Groups (SHGs)	160
*Note	<i>Design, Estimate and plan maps are given separately in soft copy to SLNA</i>	

FOREWORD

The declining per capita land and fresh water availability coupled with soil erosion and land degradation in India are posing serious threat to environmental, food, social and economic security. Land and water go together and their development cannot be considered independent of each other for sustainability of rainfed areas. Conservation and management of rainwater holds key for sustainable agriculture in rainfed areas. It has also been amply demonstrated in India and elsewhere that it is impossible to envisage or implement sustainable solutions for land and water resource development and management without active and full participation of local community. Development of land and water together with sustainable production system when confined to small natural drainage unit such as watershed leads to sustainable development. Watershed Management (WSM) has, therefore, emerged as a new paradigm for planning, development and management of land, water and biomass resources with a focus on social and institutional aspects apart from bio-physical aspects following a participatory "bottom-up" approach. A large number of projects for productivity enhancement are being implemented on the watershed approach.

Soil and water conservation including micro-scale water resource development is the foundation of any watershed development programme supported by number of other protection, production and livelihood support interventions. This is so, because water is the most crucial input and acts as a catalyst to bring in ecological, social and economical revolution. Sustainable production depends considerably upon proper development, conservation, management and use of watershed resources at micro-level. Watershed management becomes increasingly important as a system approach to improve livelihood of people while conserving and regenerating their natural resources. The role and Importance of community participation in ensuring the success and satiability of watershed management is now widely accepted.

Two-thirds of the country's agriculture is rainfed. Only one-third of the 142 m ha of cultivated in India is irrigated. The green revolution in the irrigated areas, induced by modern agricultural technologies, by-and large by-passed the rainfed regions. Agriculture in these regions is characterized by low levels of productivity and low input usage; food grain yields in rainfed areas are half those in irrigated regions. Dependence of rainfall makes crop production considerably unstable in rainfed areas, which are home to the bulk of the rural poor. The Government of India has accorded highest priority to the holistic and sustainable development of rainfed areas through the integrated watershed development approach. The key attributes of the watershed approach are conservation of the rain water and optimization of soil and water resources in a sustainable and cost effective mode. Improved moisture management increases the productivity of improved seeds and fertilizers, so conservation and productivity enhancing measures become complementary. Under rainfed conditions choice of technologies are going to vary from location to location due to high degree of complexity and diversity in situations. This applies to the technologies for development of natural resources as well as for enhancement of productivity of different commodities in agriculture and allied sectors. While carrying out participatory planning exercises, the watershed development team (WDT) may orient community members about different scientific and indigenous technological options available with them through IEC and training courses etc. and leave the final choice to them. Keeping these things in mind, the DPR of Bijnor IWMP-V watershed has been prepared.

MESSAGE

Deen Dayal Upadhyaya, State Institute of Rural Development, Uttar Pradesh has been commissioned by State Level Nodal Agency, IWMP to prepare proposed DPRs for 55 identified watershed in the State. Integrated Watershed Management Programme (IWMP); a centrally sponsored programme is aimed towards sustainable regeneration of ecological balance and suitable agricultural and allied production interventions by properly managing and harvesting rain water and thereby increasing production and productivity, providing equitable opportunities and economic upliftment to all section of society in project area. The cost of project is estimated at Rs. 12000.00 per ha. The project will be implemented on watershed basis having an area of about 5000 ha in duration of 5-7 years. There are various components of the project to achieve the set objectives. It is pertinent that a detailed project report (DPR) has been prepared with all the details of plan, design, cost, execution and arrangement for management and evaluation.

Deen Dayal Upadhyaya, State Institute of Rural Development, Uttar Pradesh has prepared this DPR after comprehensive grand study and survey and using available scientific data. I am sure the DPR, if implemented as per the designed interventions, will not only restore ecological balance but will be of immense help for the farmers and agricultural sector to improve their quality of life.

I wish all success to all concern specially those who earn the livelihood from agriculture and allied activities.

Sri. N. S. Ravi (IAS)
Director General

ACKNOWLEDGEMENT

We would first like to extend our thanks to the Chief Executive Officer (CEO) of State Level Nodal Agency (SLNA), IWMP for awarding the assignment of preparation of detailed project report (DPR) of 55 watersheds to DDU SIRD, Lucknow. We extend our heartiest gratitude to Sri N.S. Ravi, I.A.S., Director General, DDU SIRD, Lucknow for assigning the assignment to us and providing all necessary logistic support. We are thankful Sri K. P. Tripathi, former Principal Scientist, Soil & Water Conservation Engg., ICAR-IISWC (formerly known as CSWCRTC), Dehradun for their valuable suggestions and guidance during the process of DPR preparation.

We are very grateful to Dr. Ashok Kumar, Assistant Director, Soil Conservation and Water Management; Sri S. G. Sahoo and Sri R K Srivastav Senior Instructor Agricultural Engineering for helping in the process of DPR preparation. We are thankful to all the farmers of the watershed who cooperated during the PRA/data collection and gave their valuable suggestions.

Dr. Vardani
Additional Director

Executive summary

Executive Summary of DPR of Dhampur Watershed, Bijnor District, Uttar Pradesh

The Dhampur watershed having a geographical area of 9266.59 ha. is situated in the district of Bijnor (UP). It has been designated as IWMP-V watershed which has seven microwatersheds (code: 2B4D3h3c, 2B4D3h3b, 2B4D3h3d, 2B4D3h3a, 2B4D3e3c, 2B4D3h1b, 2B4D3h1c). It includes 84 villages of 45 village panchayats.

The total geographical area of Dhampur watershed is 9266.59 ha. About 87% area of the watershed is under cultivation, 1% area comes under community land; rest left over area comes under Forest land, orchards, industries and other uses.

The Topography of Bijnor district is mainly a plain. The district has a pleasing climate with cool and foggy winter and generally hot and humid summer. The wet session starts from July to October during which the district receives rainfall. The temperature of the district varies from 48C in summer and 3C in winter. The elevation varies from about 111 meter (min.) amsl to 120 meter (max.) amsl in the extreme south east, on the banks of the Ganga.

River Ganga separates Bijnor district and is the main river of the district. Next comes the East Ramganga River. The other rivers of the district are Khoh, Ban, Gangan, Karula, Malin, Ekra, Chhoiya, Pili, Dhara, Panili and Phika.

About 61% people in the watershed are literate. 68% male and 52% female are literate. In comparison, females are less educated in number than males. Mass education should be spread by establishing more primary and secondary schools. It must be made both compulsory and free for the females and the males as well, so to improve the economic condition of the watershed. The economic condition of the people is not very encouraging as about 93% family of the watershed is landless, hence their livelihood depends upon the occasional employment they get in agriculture sector or they migrate to the nearby city for day to day labour work, agriculture should be modernized, to get more benefit and profit in the agricultural sector. Females of the watershed help in farm operations and cut bamboo wood from the forest. They also keep cows, buffaloes and poultry. They also keep kitchen gardens, collect tendu patta, make ropes and do carpentry. It is the womens make purchases from the market and decide on the finances involved in the marriages of their children. Thus the women have the dominating role in the district. The womens are keen observers of festivals and like to visit fairs. Both men and women smoke and drink on a large scale. In their leisure time, they get together in small groups and discuss village affairs and casual scandals. The status of women in general is atrocious in the watershed. They are the largest labour force inside and outside the family.

There is the manufacturing of cane & bamboo product like furniture etc. Various cottage and small-scale industries in the district are dependent on the supply of different kinds of cane and reeds. Cane is also found in abundance almost throughout the state. There are a few more varieties of bamboo and cane used for manufacturing of different products. A kind of muli bamboo locally known as ‘muli bazail’ is used for making

umbrella handles. Two other varieties of bamboo locally known as ‘Mrithinga’ and ‘Bethua’ and different varieties of canes locally known as ‘sundi’, ‘barjali’, ‘harua’, ‘golla’ etc. are required for making furniture and baskets. Various types of cane and bamboo products are found in this state. The people of the plains and hills districts of Bijnor have their own bamboo and cane products with distinctive features and typical designs. The products of the plain districts differ from that of the hill districts in use, shape and design.

About 25% of people are schedule cast and only few (less than 0.10%) belong to schedule tribe. About 7% families are below poverty line. More than 60% family still use fire wood for cooking the meal and only less than 6% use LPG. About 81% families of the watershed are land less. There are 549 craftsman, 373 tailors and 652 artisans in the watershed. People of the watershed migrate to the city and other areas for search of work mostly as unskilled/semi-skilled and skilled work. On an average people migrate for 6 months a year. Cutting and tailoring are having vast potentialities for rural people of the watershed the city of Bijnor are famous for its Aonla (a citrus food) production.

The crop productivity is low due to low organic matter in the soil. Chemical fertilizers are given to the crop without soil analysis thus, creating imbalance in the soil nutrients. FYM and organic fertilizer are not in practice due to absence of sufficient raw material as the soil is light to medium in texture.

Total cost of the project works out to be Rs. 13.13 crores. Out of this Rs. 4.59 crores is proposed to be met from convergence under MGNREGA and Rs. 6.69 lakhs Horticulture Dept. (NHM) etc. The amount of Rs. 7 crores will be met out from IWMP. The benefit: cost ratio is estimated at 1.31:1. About Rs 1.46 crores is expected to be collected from farmers as their contribution for watershed development fund.

Chapter 1: Introduction and Background

1.1 Background of IWMP

National Rainfed Area Authority (NRAA) framed common guidelines (2008) for watershed programmes to all ministries/departments. The provisions in the common guidelines and the observations of the Parthasarthy committee have necessitated modifications in the watershed schemes of the Department of Land Resources. Accordingly, Drought Prone Areas Programme (DPAP), Desert Development Programme (DDP) and Integrated Wastelands Development Programme (IWDP) of the Department of Land Resources have been integrated and consolidated into a single modified programme called Integrated Watershed Management Programme (IWMP). This guideline was further amended in 2011. This consolidation is for optimum use of resources, sustainable outcomes and integrated planning.

1.2 Vision

The watershed management program in the country has been conceptualized as rainwater management program in the rain fed areas of the country, which constitutes roughly 60% of the total net cultivated land of about 144 mha of the country. It is observed that though the rainfed land is about 60% of the total cultivated land of the country but its contribution to the total food production of the country is less than 40%. As the monsoon in India is unpredictable and drought and floods are observed at peoriodical interval hence, rainwater management is considered as focal point to the solution of the problem of uncertainty of rainfall under rainfed condition. The Indo-Gangetic plain of the country has numerous perennial rivers but still rainfall is the main source of irrigation and domestic need of the people. Presently exploitation of groundwater has been at faster rate thnn its recharge. Therefore rainwater management does not only aims to create surface irrigation potential but also aims to augment groundwater. Under such vision the IWMP has been designed.

1.3 State of Uttar Pradesh

Uttar Pradesh is situated in northern part of India. Its geographical area is about 243290 sq km. It accounts for 6.88 percent of total geographical area of the country. The population of the state is about 200 million as per census of 2011, which accountes for 16.49 percent of the total population of India. This is most populous state of India and ranks fifth in population. The highest density of population is also found in this region. On account of highest density of population, the per capita availability of land is very low in comparison to other states. The state is divided into 4 divisions, namely Western (30 districts), Eastern (28 districts), Central (10 districts) and Bundelkhand (7 districts). At present state have 75 districts, 327 tehsils, 822 blocks and 107452 revenue villages. The state is also dividend into 9 agro climatic zones, 1.Tarai Region; 2.Western Plain Region; 3.Central Western Region; 4. South Western Region; 5.Central Plain Region; 6.Bundelkhand Region; 7.North Eastern Plain Region; 8.Eastern Plain Region and 9 Vindhyaachal Region. The flood and drought are common phenomena of this region.

The state has more than 32 large and small rivers, of them, the Ganges, Yamuna, Sarayu, Betwa and Ghaghara are larger rivers of the state. Lucknow is the capital of Uttar Pradesh. Agricultural and services industries are most important activities of the state economy. About 68.54 percent land of the total geographical area of the state is under cultivation (2012-13). The percentage of net area sown in Uttar Pradesh has been decreasing continuously due to fast expansion of industrialization and urbanization in the state.

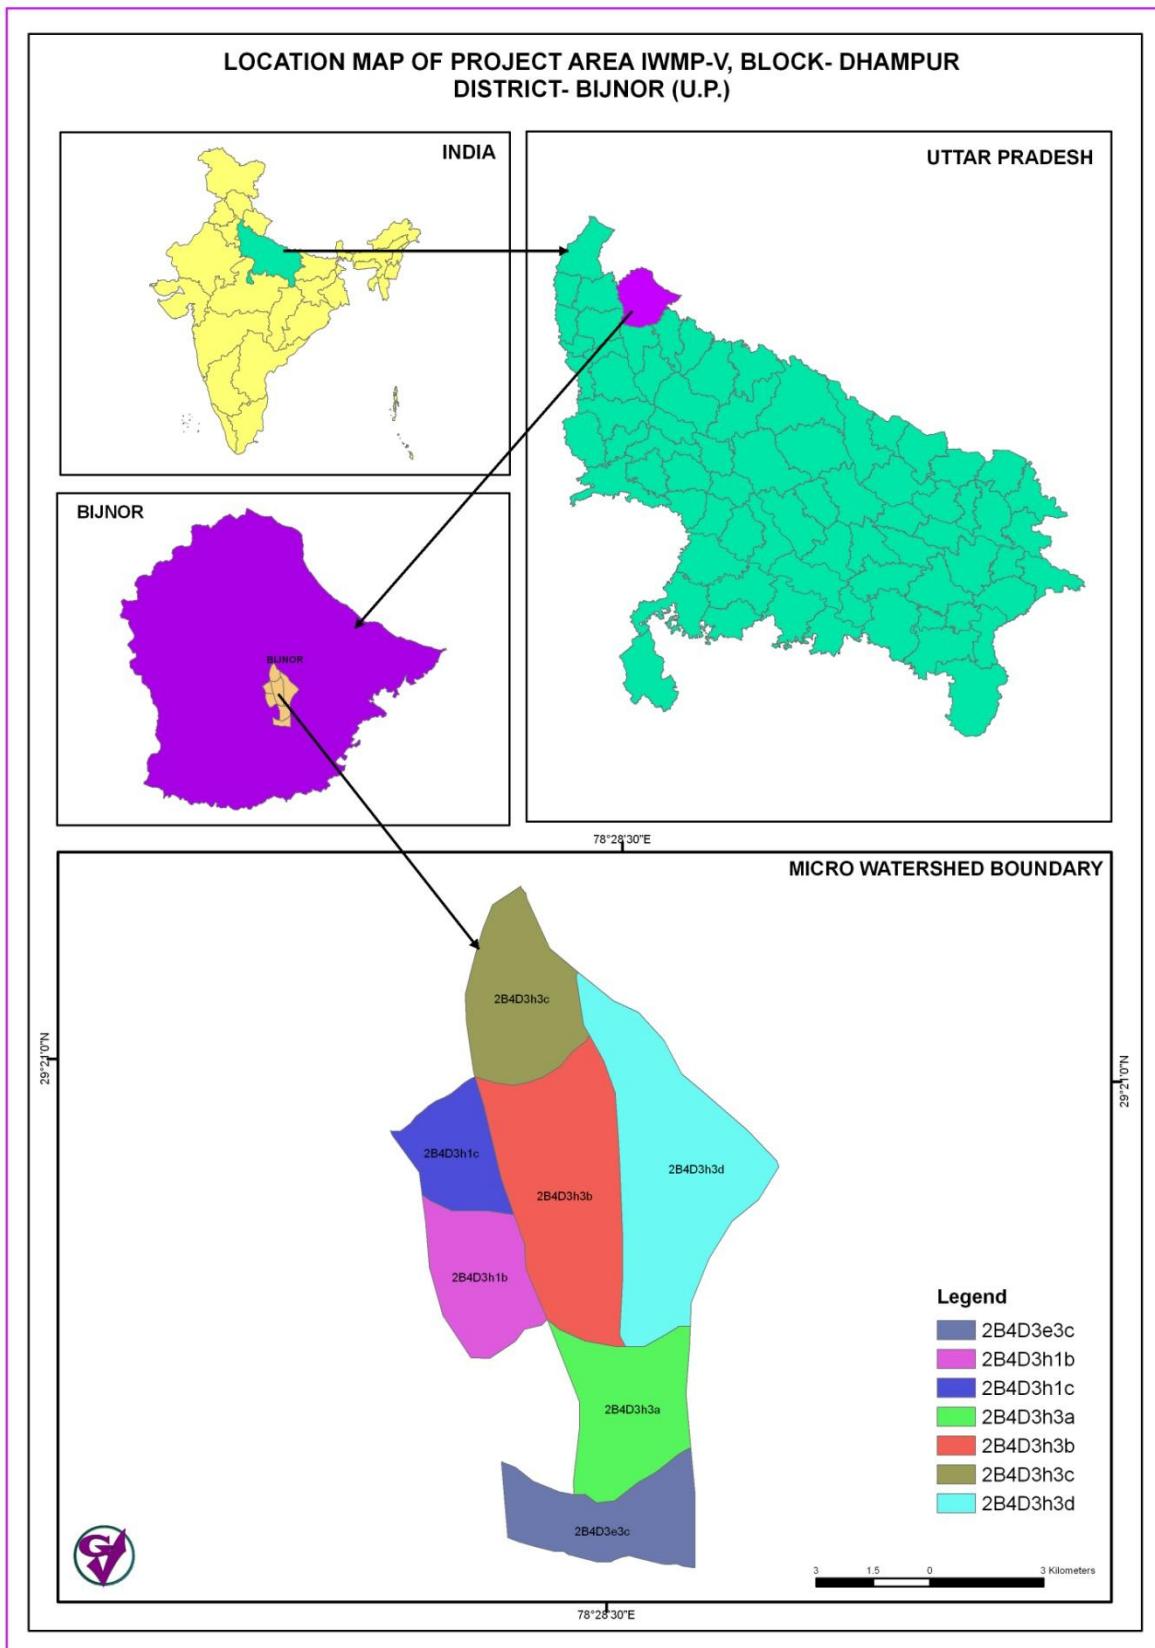

1.4 Bijnor District

Bijnaur, occupies the north-west corner of the Moradabad Division (historically, Rohilkhand or Bareilly region), and is a roughly triangular stretch of country with its apex to the north. The western boundary is formed throughout by the deep stream of the river Ganges, beyond which lie the four districts of Dehradun, Saharanpur, Muzaffarnagar and Meerut, all belonging to the Meerut Division. The district of Bijnor forms the north-western part of the Meerut Division. Legendary history ascribes its foundation to Raja Ben (also spelt Bin or Bain) and described as Vena, a minor hero king of Northern India, in the Mahabharata and the Puranas. This monarch never realised any tax from his subjects. He raised a part of the revenue by the sale of bijana (fans) manufactured by himself, because of whom the place obtained its present name, Bijnor (Bijnaur). More probably, the word is a corruption of Bijanagar (town of fans) or Vijayanagar (town of victory). Its maximum length from north to south is about 102 km. and from east to west about 90 km. To the north and north-east in the hill country of Garhwal, the dividing line being the submontane road, which runs from Haridwar along the foot of the Himalayas to Ramanagar, Haldwani and Tanakpur. This road, popularly known as the Kandi Sarak, belongs throughout its length to Garhwal, the transfer having taken place a few years since. On the east the Phika river for the greater part of its course constitutes the boundary, separating this district from Naini Tal and Moradabad, as far as its junction with the Ramganga; and to the south lie the Thakurdwara, Amroha, and Hasanpur tahsils of Moradabad, the boundary being conventional and undetermined by natural features.

1.5 Dhampur watershed

The Dhampur watershed having a geographical area of 9266.59 ha. is situated in the district of Bijnor (UP). It has been designated as IWMP-V watershed which has seven microwatersheds (code: 2B4D3h3c, 2B4D3h3b, 2B4D3h3d, 2B4D3h3a, 2B4D3e3c, 2B4D3h1b, 2B4D3h1c). It includes 84 villages of 45 village panchayats. The location of the watershed is depicted in **Fig 1.**

Fig.1. Location map of Dhampur watershed

Chapter 2: Objectives and Project Implementing Agency (PIA)

2.1 Major objectives

Sl. No.	Objectives
1	The main objectives of the IWMP are to restore the ecological balance by harnessing, conserving and developing degraded natural resources such as soil, vegetative cover and water.
2	Prevention of soil, run-off; rain water harvesting and recharging of the ground water table.
3	Regeneration of natural vegetation
4	Introduction of multi-cropping and diverse agro-based activities, which help to provide sustainable livelihoods to the people residing in the watershed area.
5	Promote development of cost effective and proven technologies to support watershed management

2.2 Project Implementing Agency (PIA)

Name of the PIA organization	Bhoomi Sanrakshan Adhikari, Land Development and Water Resource,	
Postal address of the PIA organization		
Name of the head of the PIA organization	Bhoomi Sanrakshan Adhikari,	
Name of the Principal Investigator (PI) i.e. Leader of the IWMP project identified by the PIA		
Designation of PI	Soil Conservation Officer	
Mobile no & e-mail of the PI		
Names of the Watershed Development Team (WDT) with their educational qualification and mobile number	Sl. No.	Name, qualification and mobile number
	1	Sri. Jaipal Singh
	2	Sri. Avneesh Kumar
	3	Sri. Kranti Prasad
Names and designation of members of Watershed Cell and Data Centre (WCDC)	1	
	2	
	3	
	4	
Year of commencement of the project	2011-12	
Year of completion of the project	2016-17	
Budget of the project (in Lakh)	700.56	

Chapter 3: Present scenario of the watershed

3.1 General Profile of the watershed

Sl. No.	Parameter	Information/value
1	Name of State	Uttar Pradesh
2	Name of District	Bijnaur
3	Name of the Tehsil	
4	Name of Block	Dhampur, Aaku
5	Name of post office with pincode	
6	Watershed details	IWMP- V
i	Name of Watershed	Basera Narayan, Dhakka Karamchandra, Aladipur Bhatpura, Needdu Khas, Daulatpur Sukhkhya, Raipur Mulak, Kashmiri Abbu Naseerpur
ii	Code of Watershed	2B4D3h3c,2B4D3h3b, 2B4D3h3d,2B4D3h3a, 2B4D3e3c,2B4D3h1b,2B4D3h1c
iii	Location of watershed	
iv	Agro Ecological Region	
v	Agro Climatic Zone	Bhabar & Tarai Zone
vi	Geographical area of the watershed (ha)	9266.59
7	Major drainage system	Ganga River
8	Stream order of the watershed	
9	Highest elevation on the topo-sheet (m)	
10	Lowest elevation on the topo-sheet (m)	
11	Elevation difference (m)	
12	Length-Width ratio of the watershed	
a	Latitude	
b	Longitude	
13	Boundaries (N, S, E, W)	
14	No. of Villages in the Project area.	84
15	No. Villages Panchayats in the Project area.	49
16	Area	Fill the table 1
i	Total geographical area of the watershed (ha)	9266.59
ii	Treatable land (ha)	5838
iii	Arable land (ha)	8056.62
a	Single cropped area (ha)	
b	Double cropped area (ha)	
iv	Grass land/Pasture land (ha)	
v	Social forest/Community forest (ha)	
vi	Area under fruit trees (ha)	
vi	Area under miscellaneous use (ha)	
17	Infrastructure/amenities	
i	Distance of metalled road from village/watershed (km)	
ii	Distance of nearest railway station (km)	3 km
iii	Distance of nearest market (km)	2 km
iv	Distance of Taluka/Tehsil/block (km)	8 km
v	Distance of district headquarter (km)	

vi	Distance of nearest school	
a	Primary (km)	3 km
b	Senior (km)	5 km
c	College (km)	6 km
vii	Distance of nearest P.H.C. (km)	5 km
viii	Distance of nearest Veterinary Hospital (km)	4 km
ix	Distance of nearest post office (km)	3 km
x	Distance of nearest bank (km)	1 km
xi	Distance of nearest ration shop (km)	0.5 km
xii	Distance of nearest police station (km)	3 km
xiii	Distance of nearest panchayat bhawan (km)	5 km
xiv	Distance of nearest Community/ recreation centre (km)	6 km
xv	Electricity	Average
a	Source of domestic water supply	No
b	Treated water through tap	Yes
c	Untreated water through tap	No
d	Shallow dug up well	Yes
xvi	Hand pump	Yes
xvii	Any other (please specify)	No
a	Source of irrigation	
b	Canal	Yes
c	Tube well	Yes
d	Open well	Yes
e	Open dug up ponds	No
xxiii	Any other (please specify)	No
a	Types of cattle	
b	Buffalo	Yes
c	Bullock	Yes
d	Cows	Yes
e	Goats	Yes
xix	Sheep	Yes
a	Pig	Yes
b	Horse	Yes
c	Poultry	No
d	Others (Please specify)	No
e	Source of water for cattle	
f	Hand pump through manger	No
g	Open well through manger	Yes
h	Open dug up pond	Yes
i	Trough	Yes

3.2 Village wise landuse of the watershed

Sl. No	Villages			Micro-Watershed			Area details

3.3 Watershed maps

Various watershed maps viz. base map, slope map, drainage map, land capability class map, land use map etc required for planning of suitable soil and water conservation measures are given below:

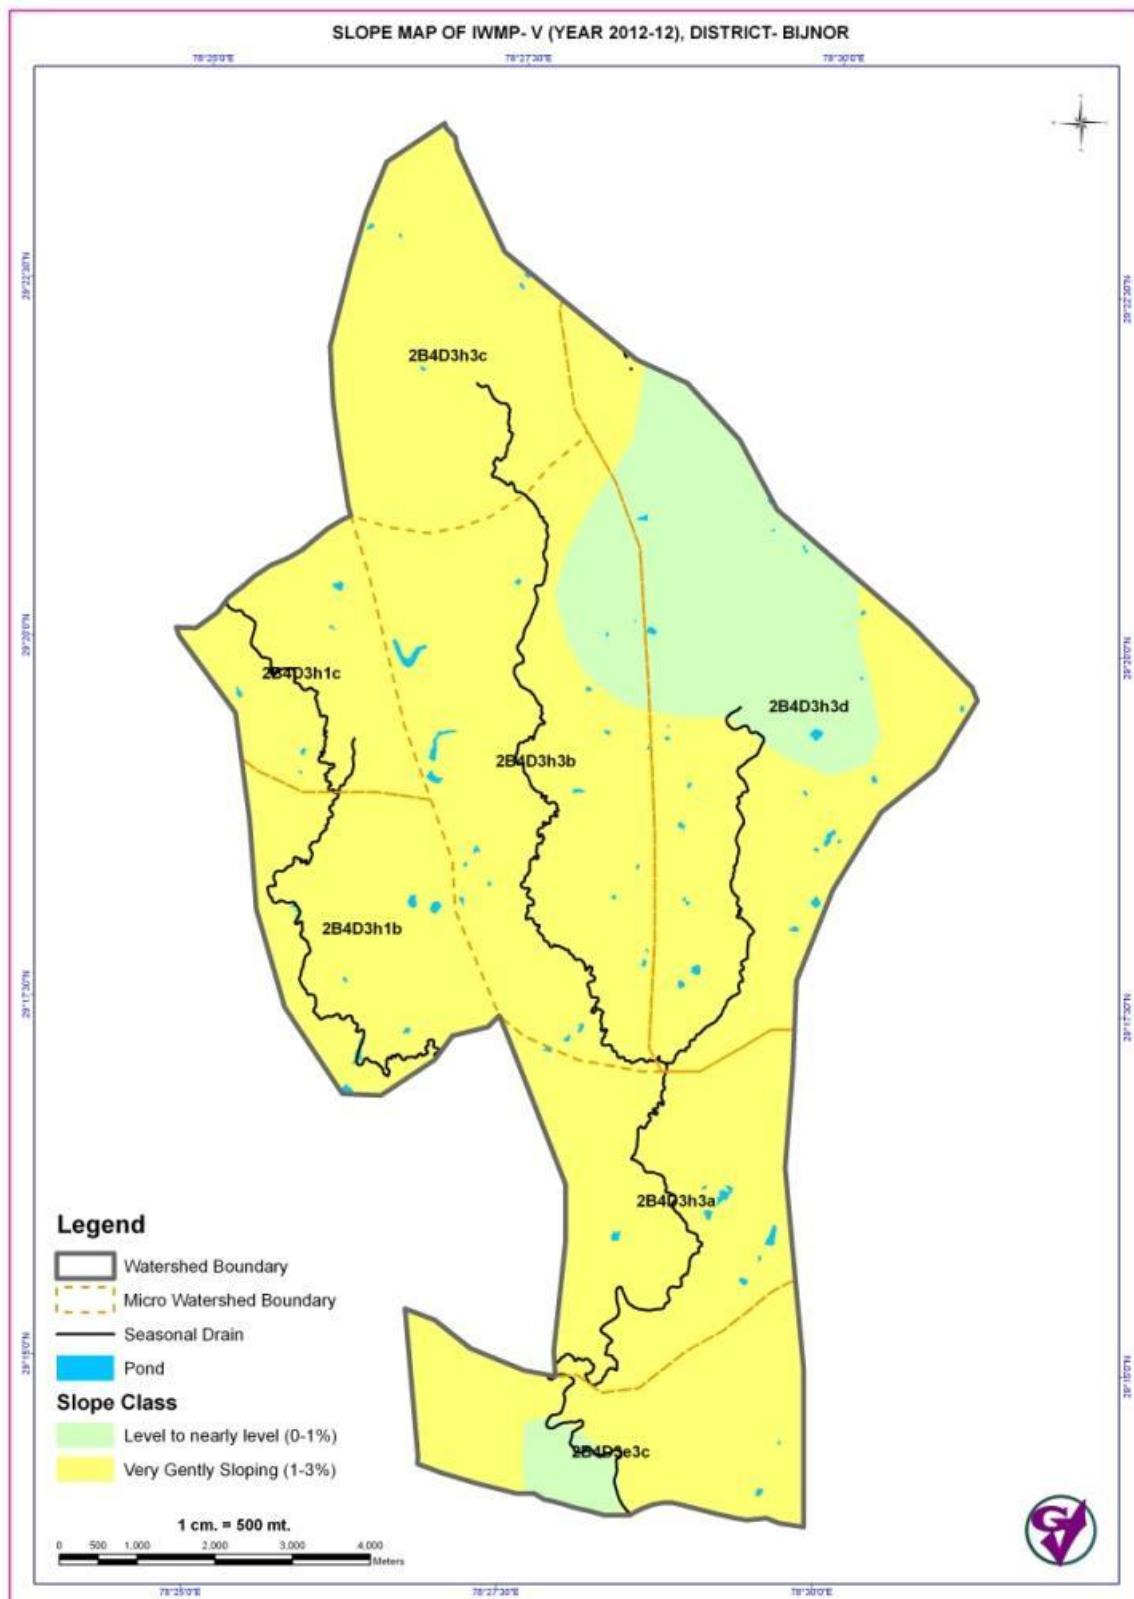

3.3.1 Base Map

The Base map of Dhampur watershed is given below:

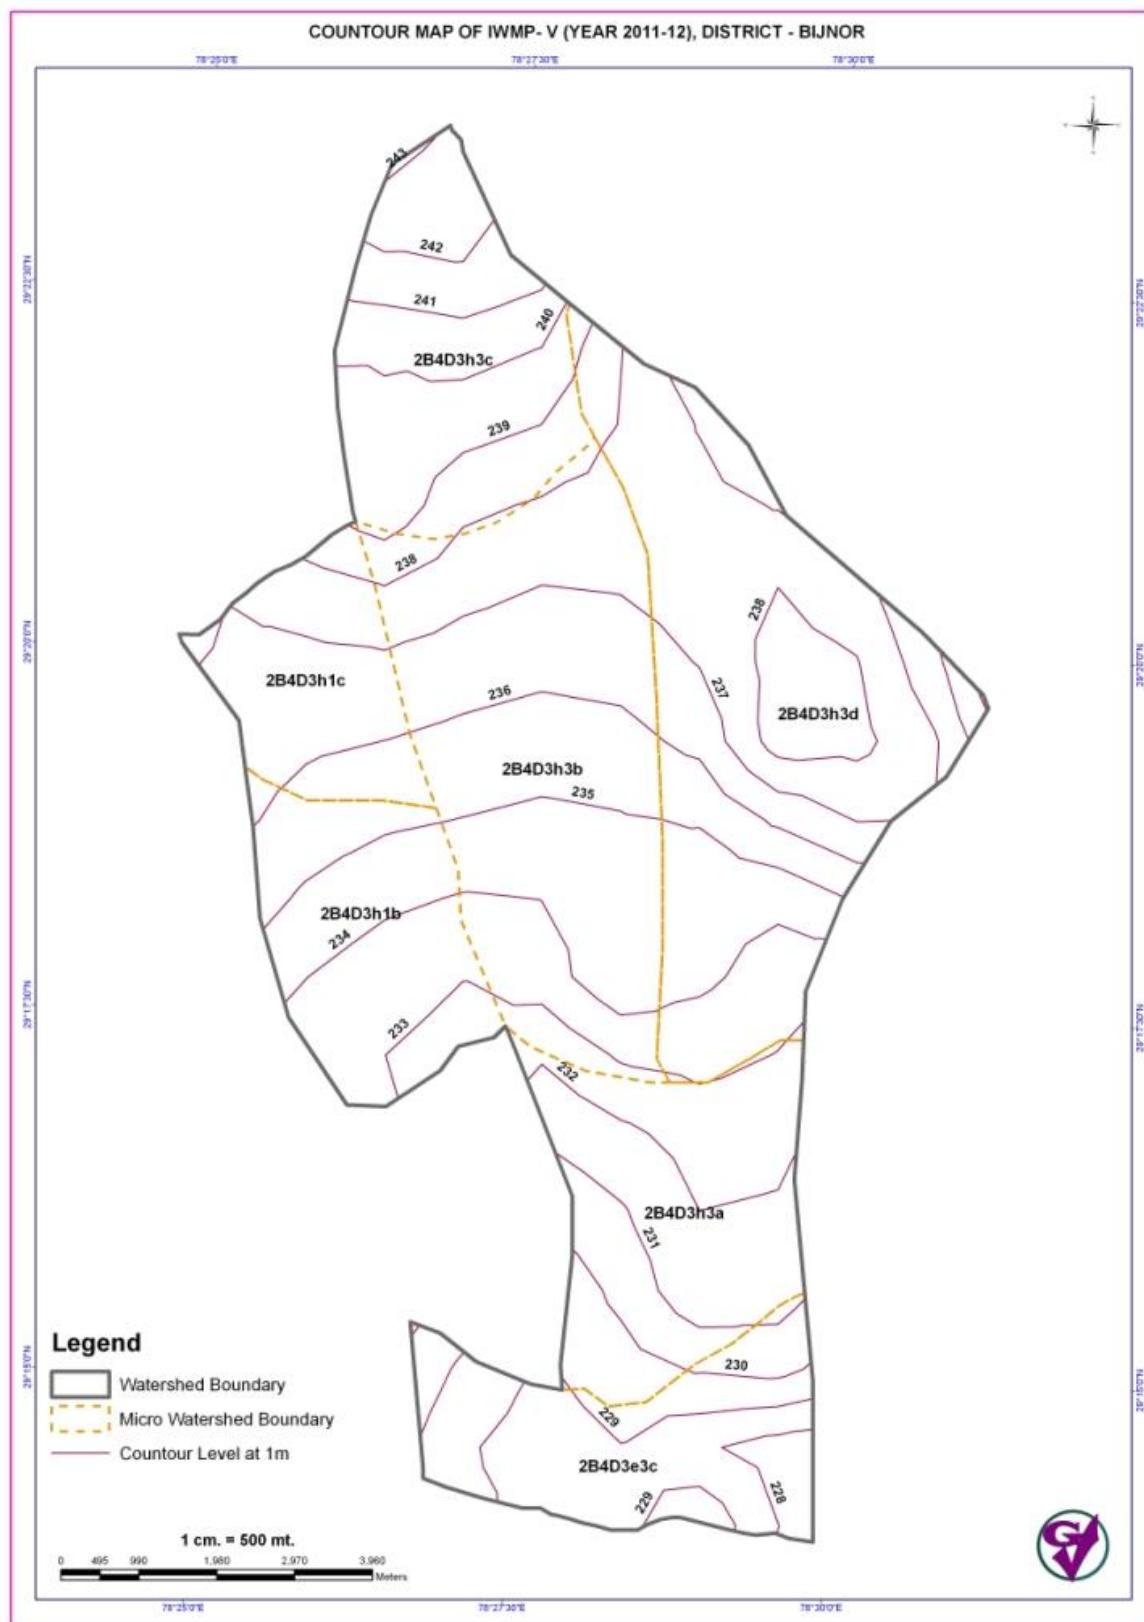

3.3.2 Slope Map

The slope map of the watershed is given below. It is observed that general land slope of the watershed is 1-3%.

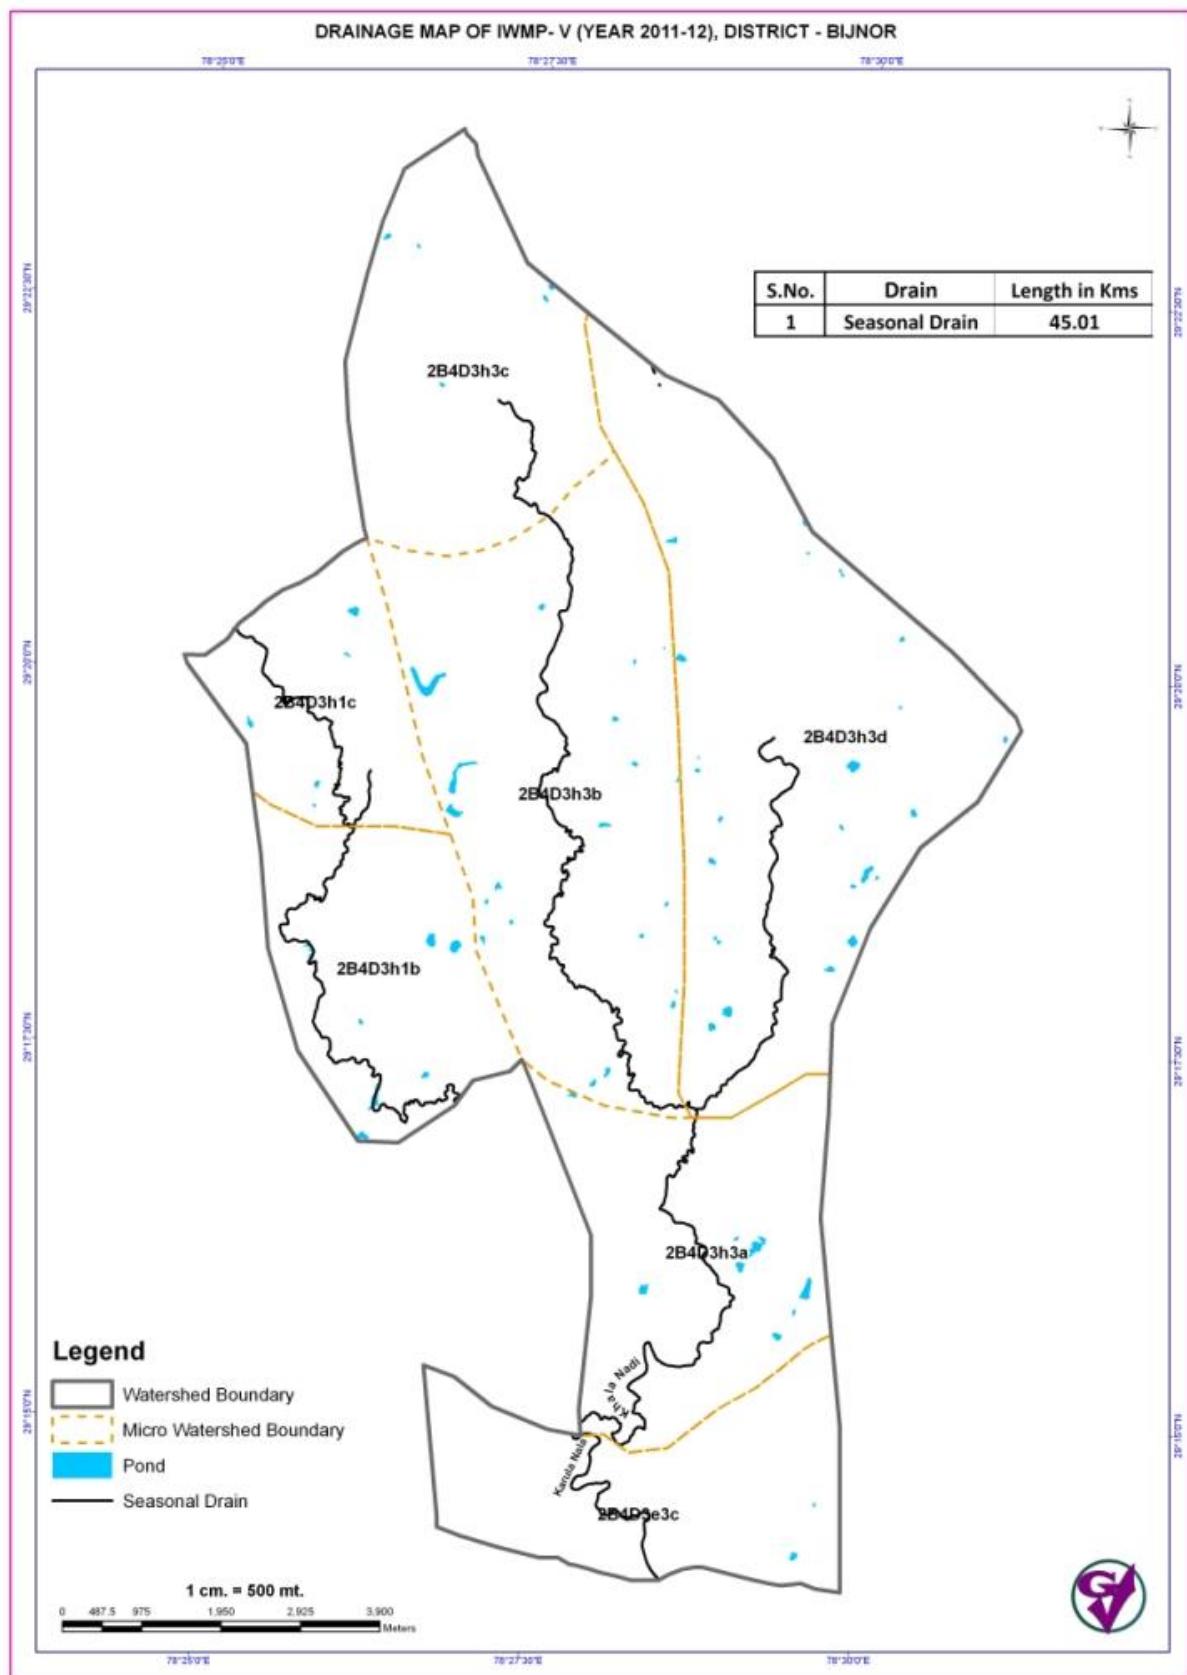

3.3.3 Contour Map

The lowest elevation of the watershed is 111 m amsl and the highest elevation is 120 m amsl. The runoff water of the watershed drains in to River Gomti.

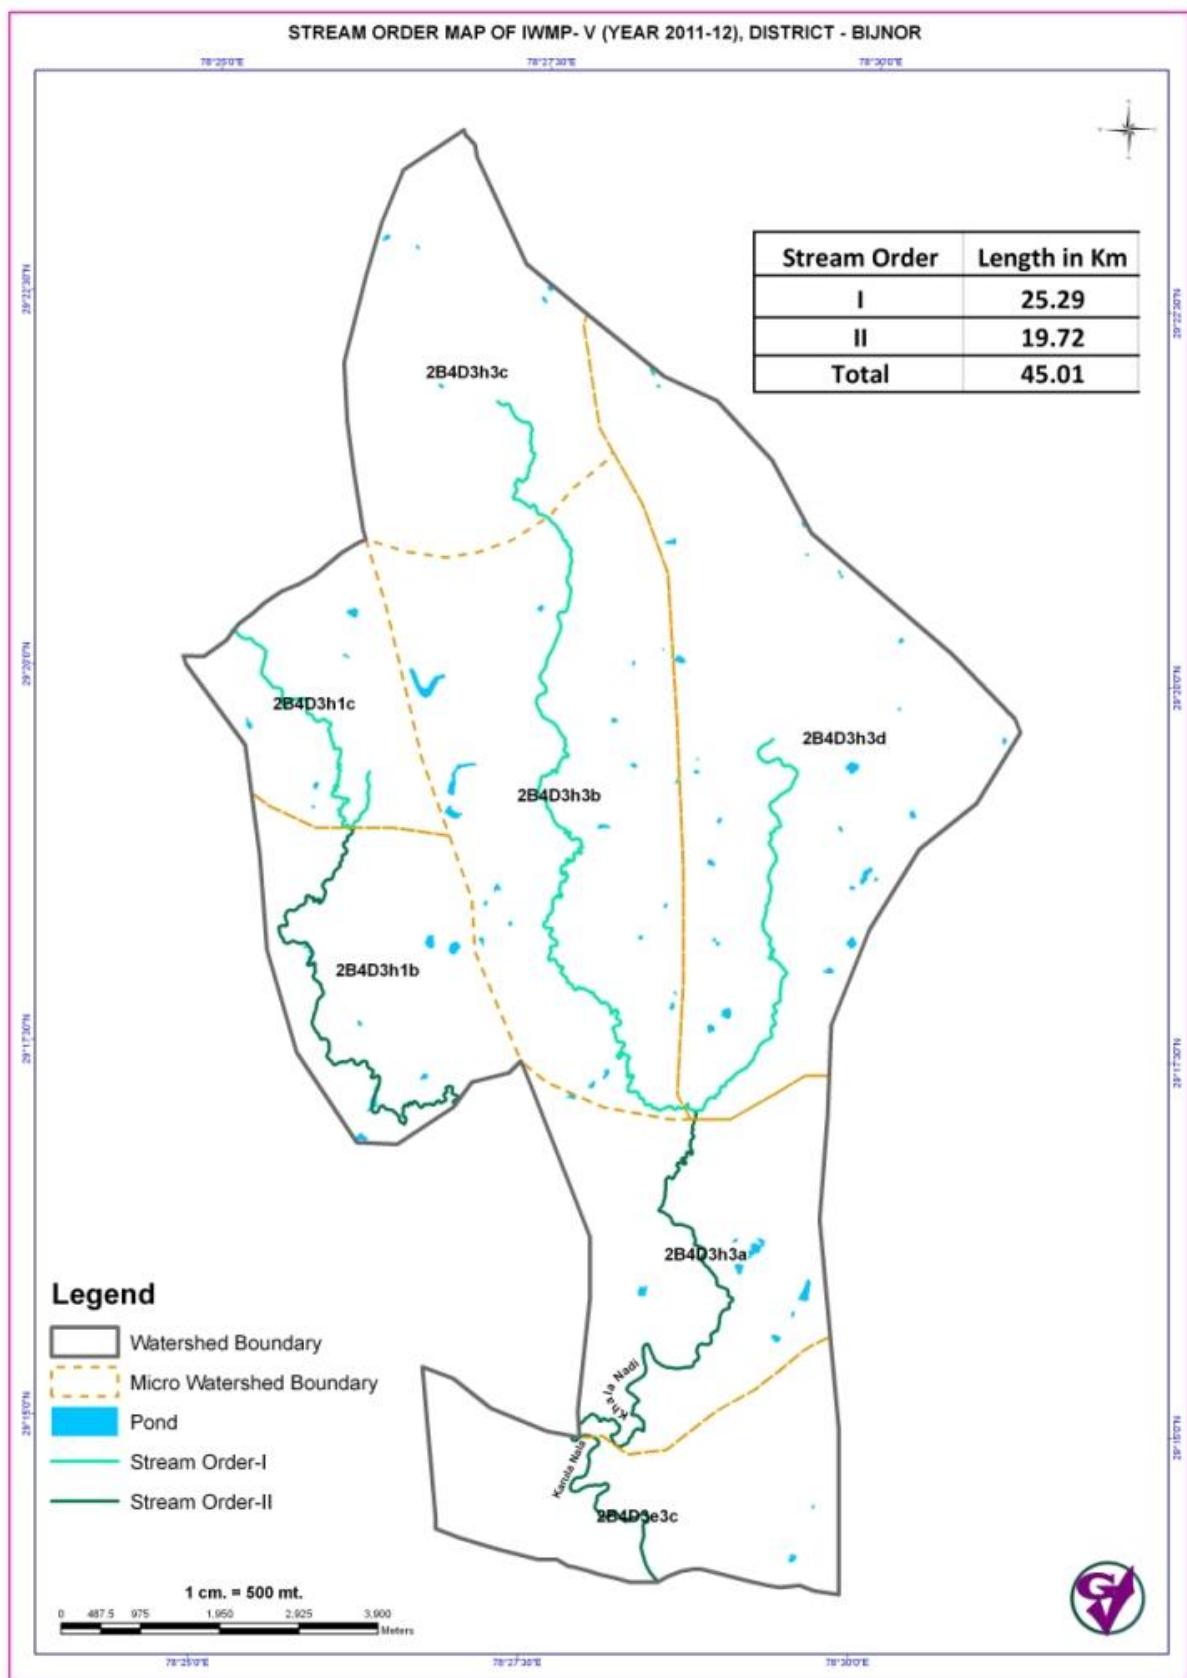

3.3.4 Drainage Map

The Dhampur watershed is Ist order watershed. The total length of seasonal stream is 45.01 km.

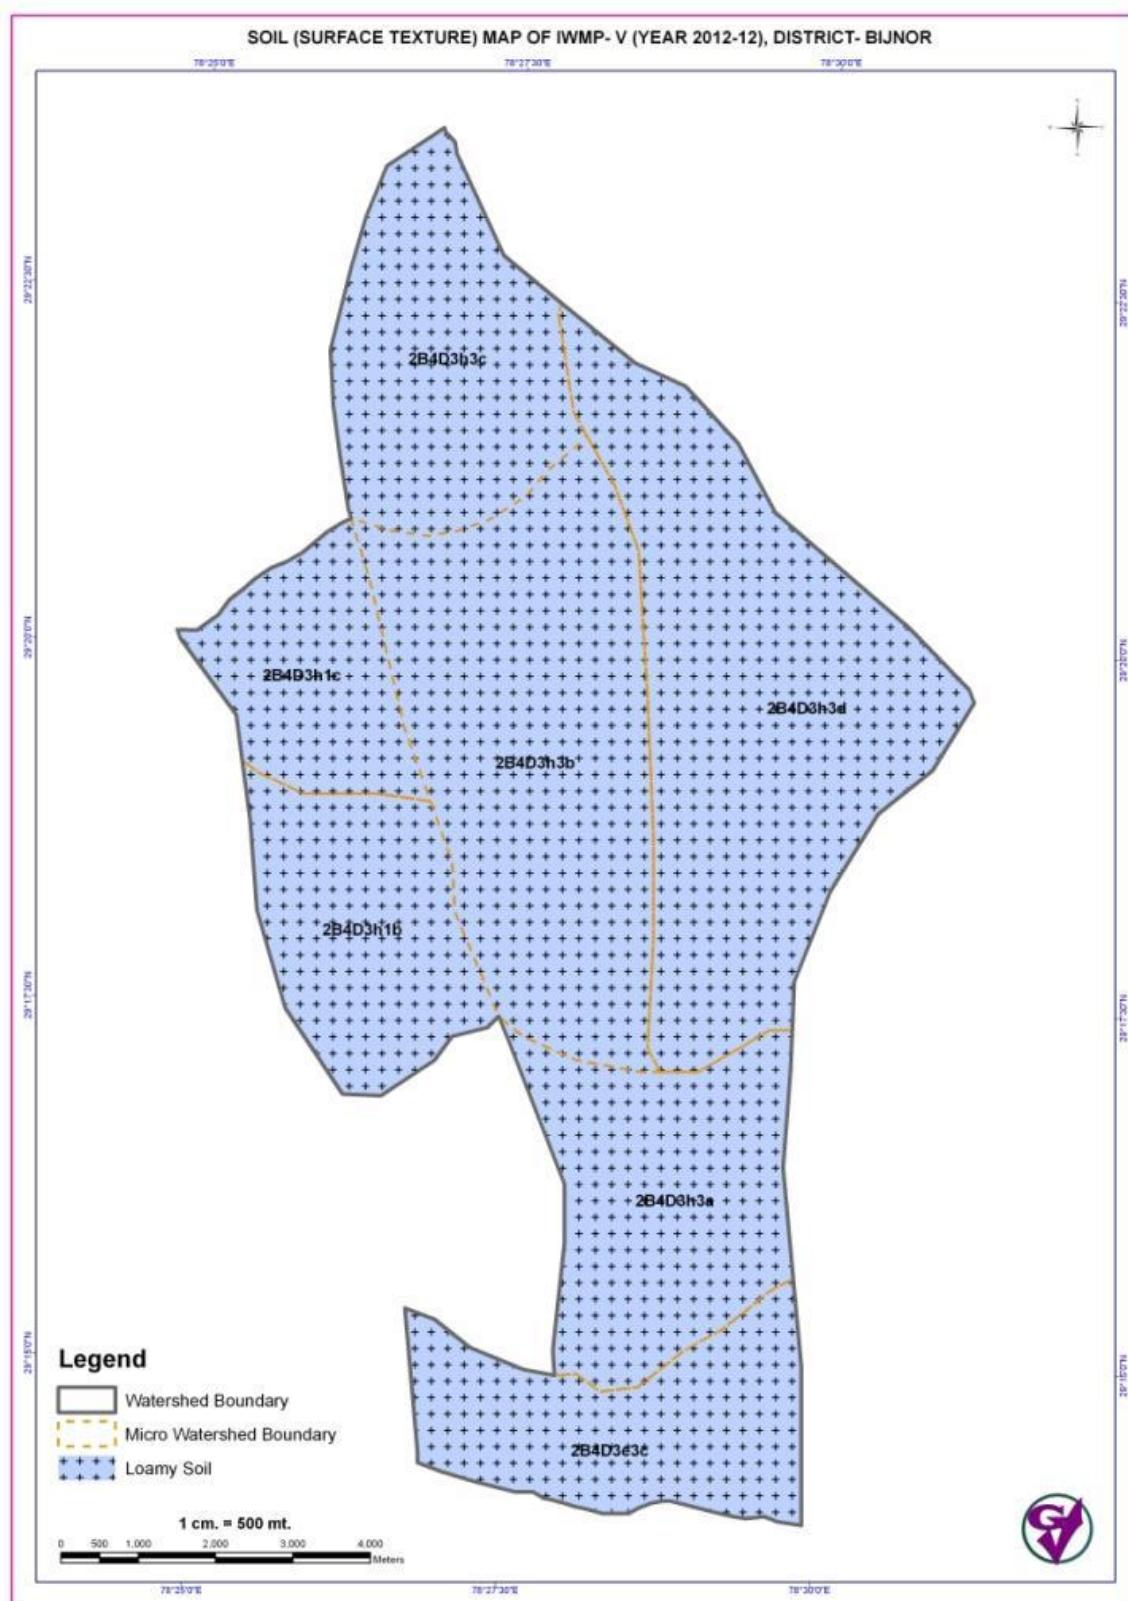

3.3.5 Stream order map

The Dhampur watershed is IST order stream watershed. The stream order map of the watershed is given below:

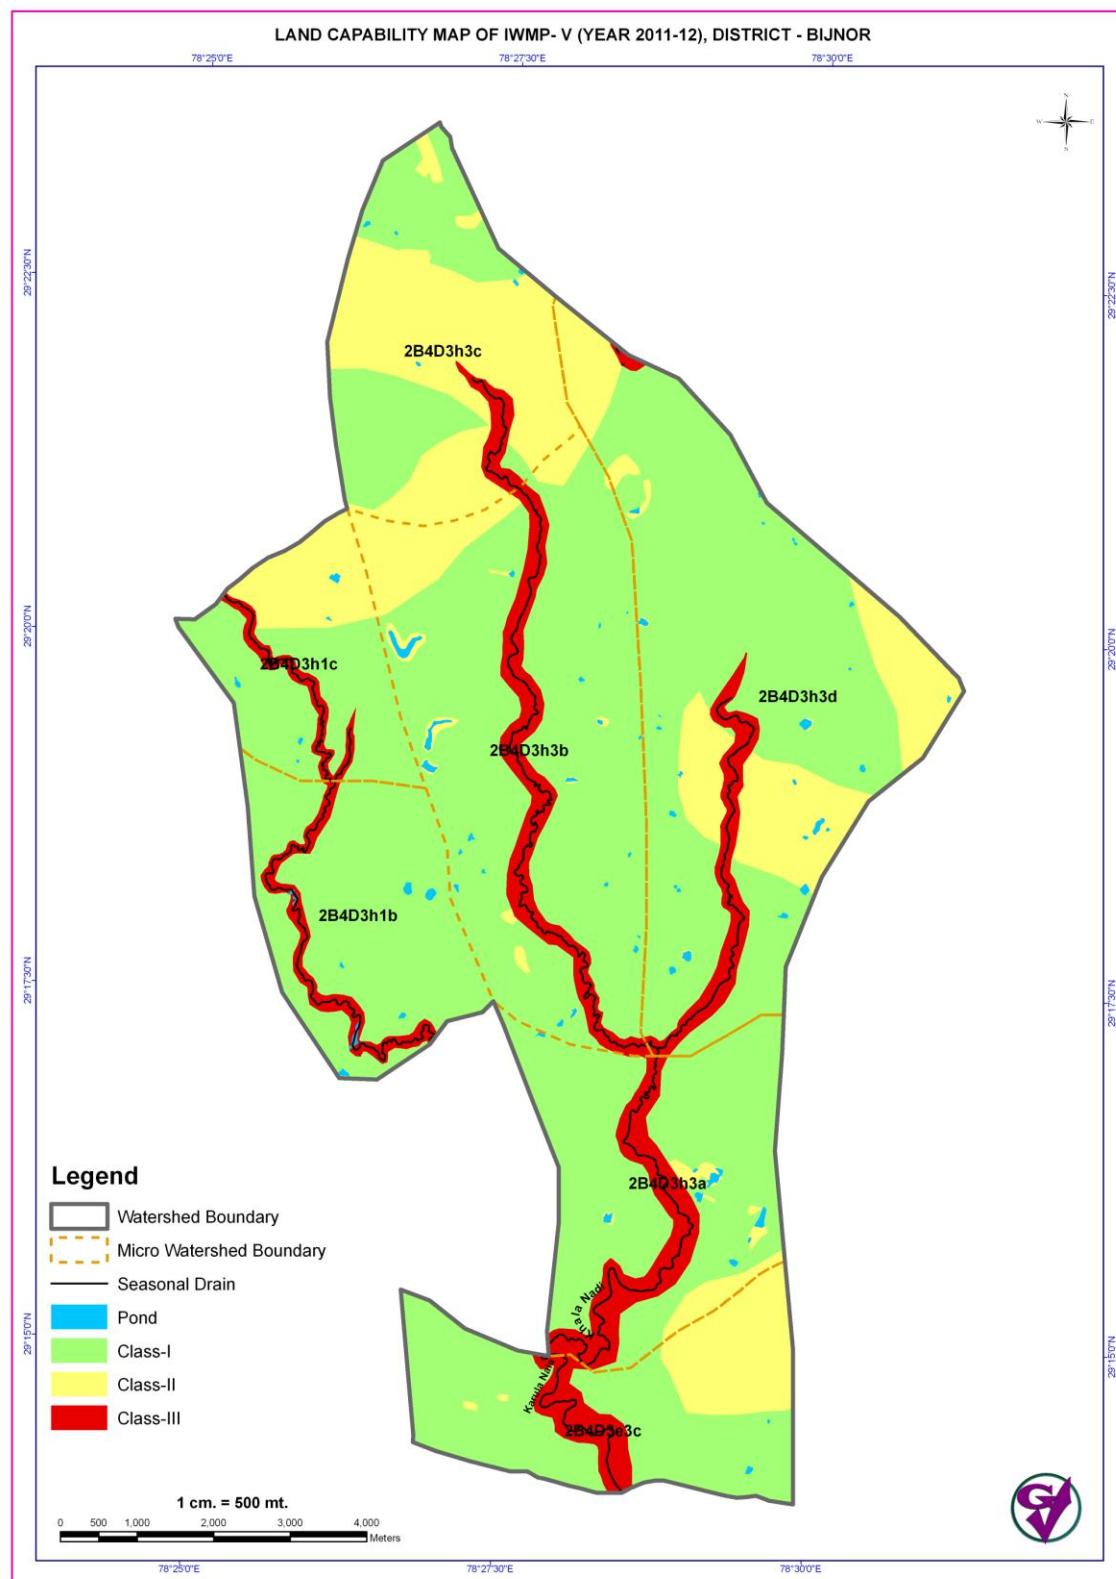

3.3.6 Soil map

The soil map is given below. The soils are light to medium in texture. Soils of the watershed are loamy and silty.

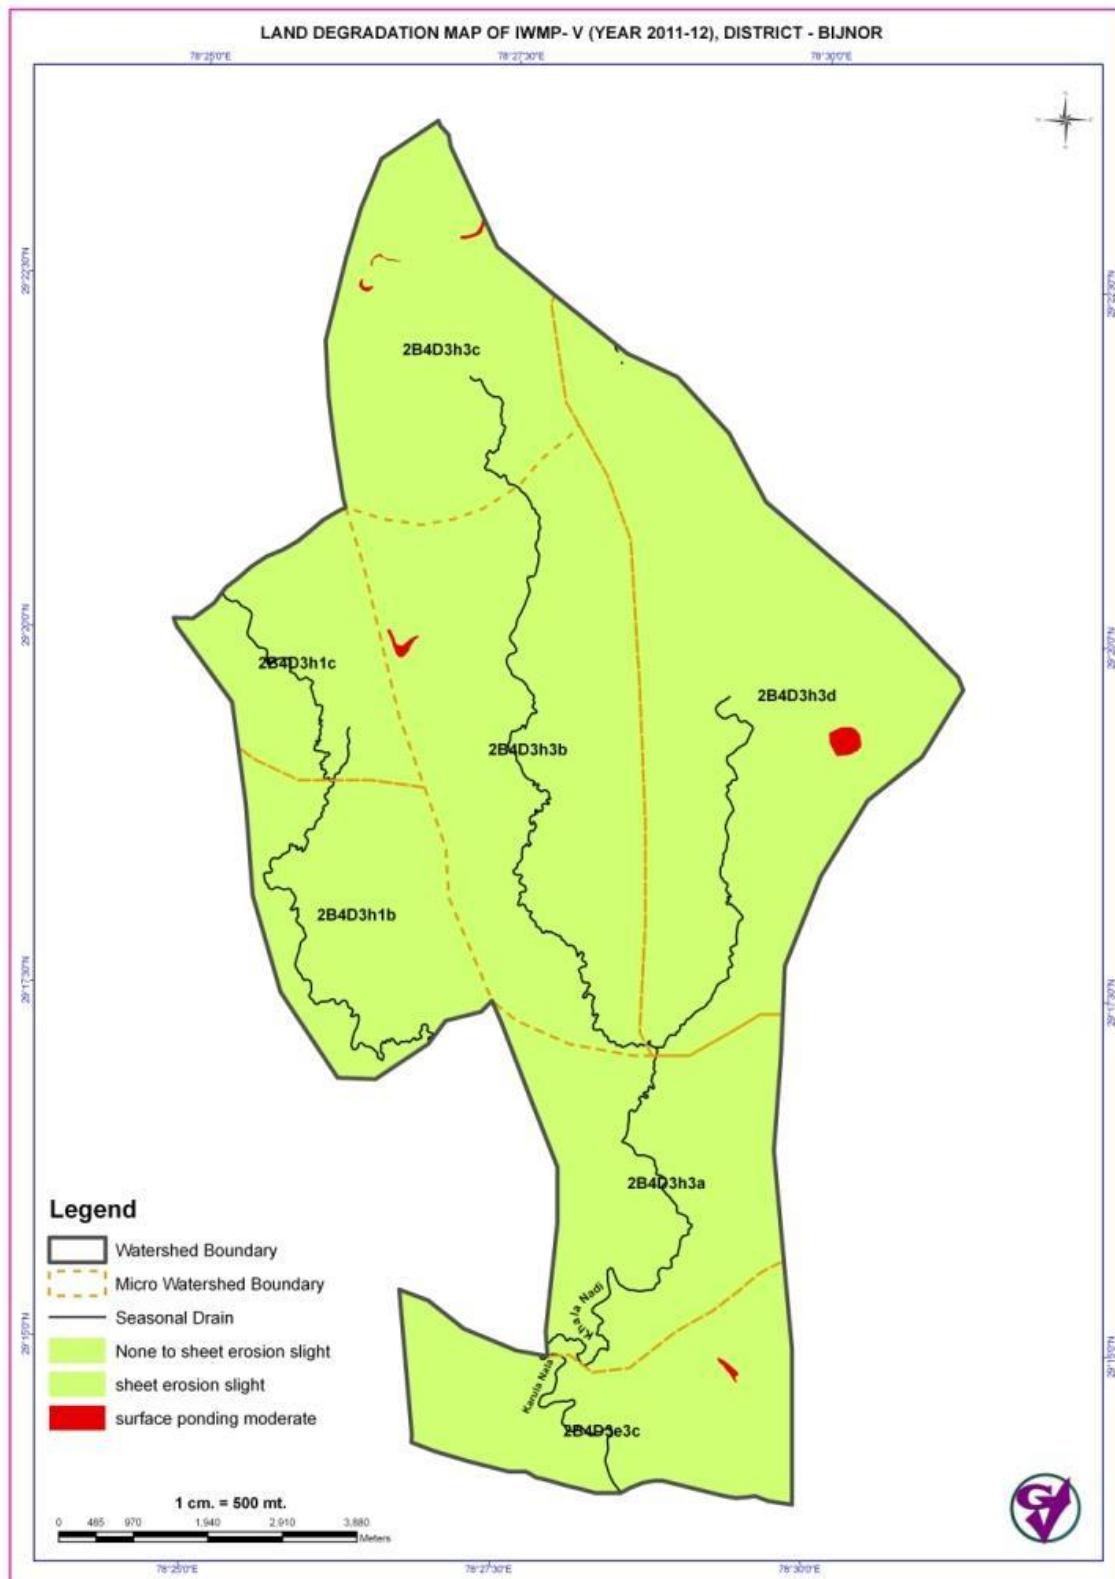

3.7 Land Capability Class

The class I land occupies about 8232.45 ha of watershed area followed by 161.11 ha under class II land, and about 873.29 ha under class IV. The land capability class map and Panchayat wise land under various classes is given below:

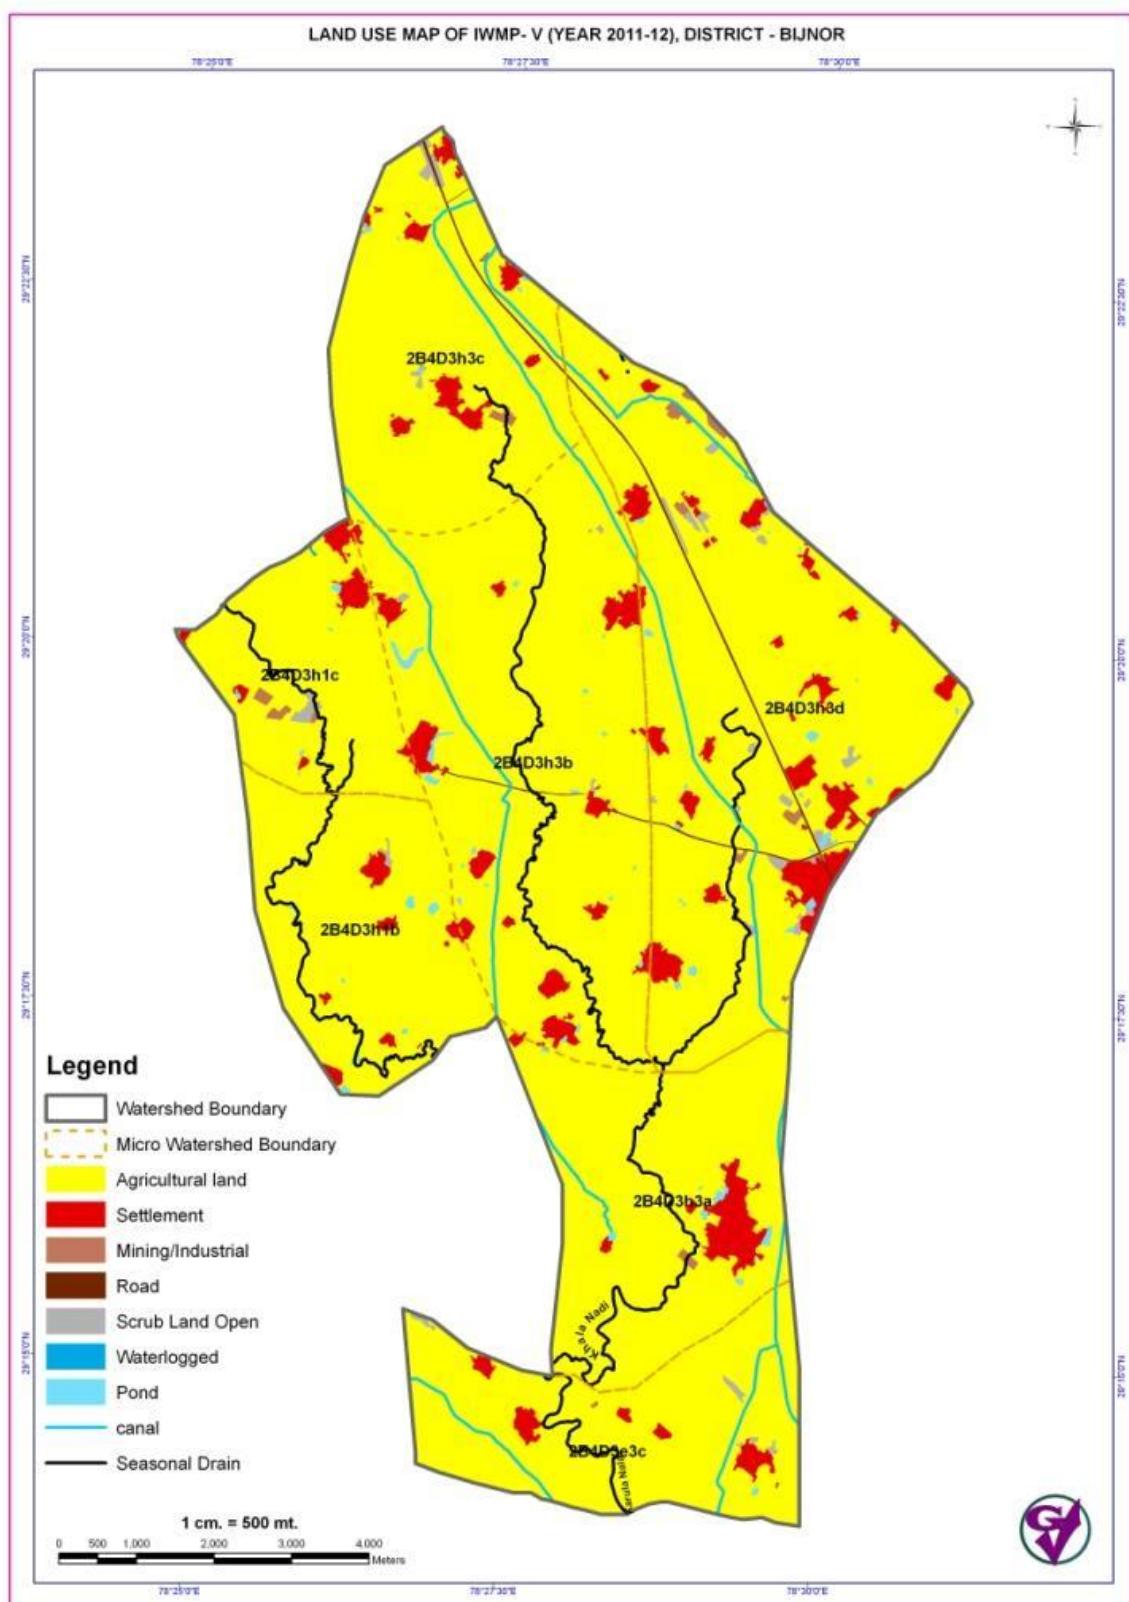

3.3.8 Land degradation

The soil erosion in the cultivated land is not a serious problem in the watershed at about 9241.11 ha area is subjected to E₁ erosion. The E₄ erosion is observed in about 25.74 ha area which is along the streams. The soil degradation map is given below:

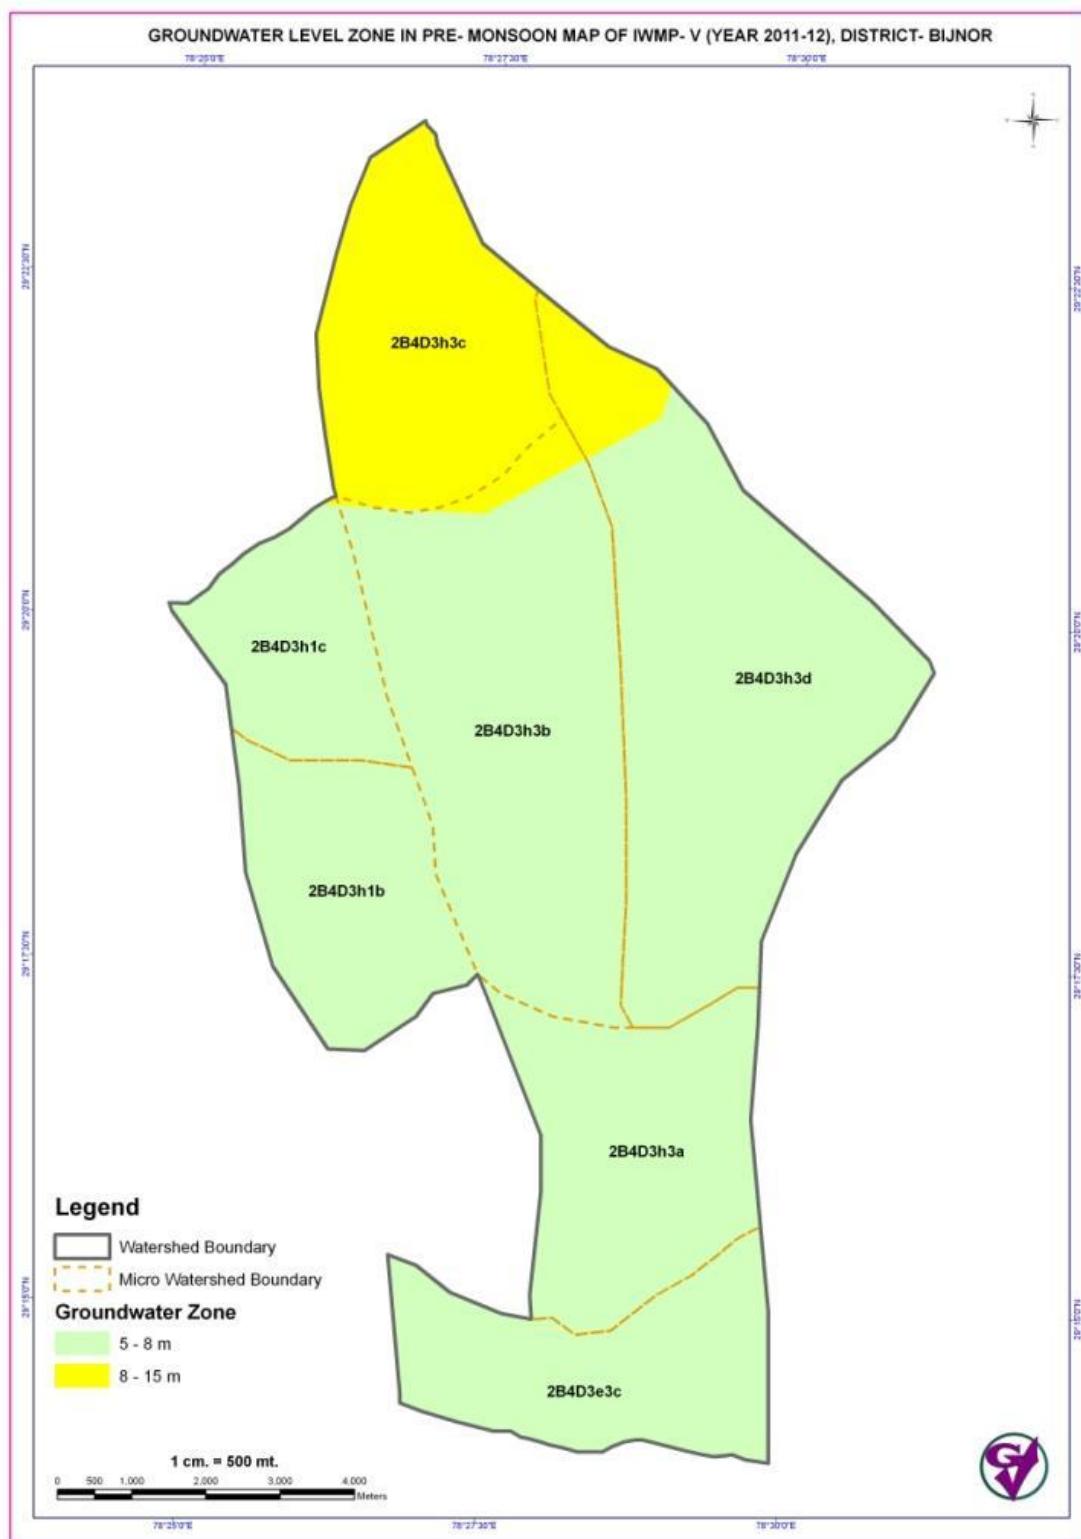

3.3.9 Landuse

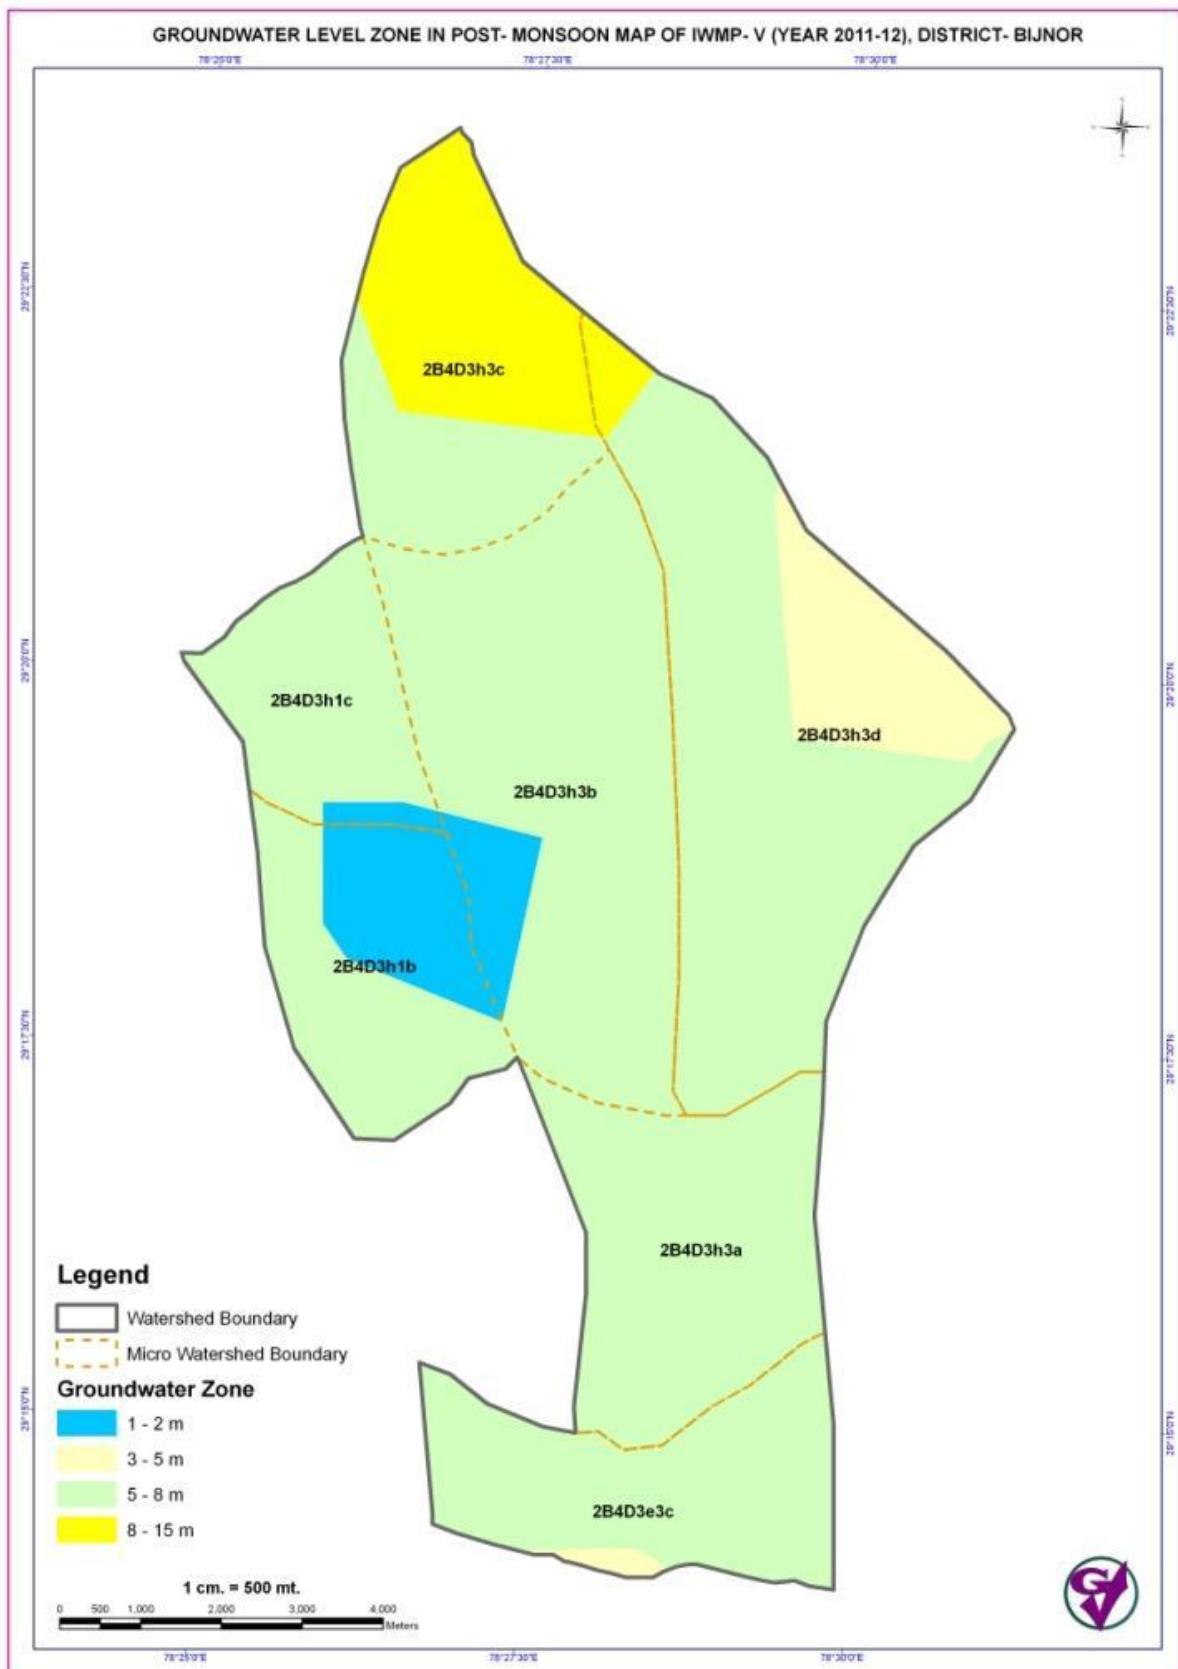

The total area of Dhampur watershed is 9266.59 ha. About 87% area of the land is under cultivation. Community land is about 1%. The remaining area of about 12% is under orchard, habitation and other uses. The land use map is given below:

3.3.10 Ground water level map

About 29.03 ha area of the watershed has a ground water depth of about 5-8 m and 2297.38 ha have a depth of about 8 to 15 m. This is pre-monsoon status. During post monsoon season about 1558.93 ha area has ground water table of 5 to 8 m. The pre and post monsoon ground water maps are given below:

3.4 Climate

The Topography of Bijnor district is mainly a plain. The district has a pleasing climate with cool and foggy winter and generally hot and humid summer. The wet session starts from July to October during which the district receives rainfall. The temperature of the district varies from 48C in summer and 3C in winter.

Month	Year				Temperature (°c)	Wind speed	Average	Open Pan evaporation
January	8.00	0.40	11.00	40.00	25° to 48°	3° to 14°		
February	29.80	16.00	1.80	113.90				
March	0.00	6.70	17.50	15.80				
April	0.00	1.50	2.30	0.00				
May	20.30	52.20	0.70	0.00				
June	7.90	154.5	1.60	208.10				
July	568.00	188.8	179.3	219.30				
August	299.80	368.1	212.3	383.60				
September	347.50	62.20	175.2	63.30				
October	1.70	0.00	0.00	40.50				
November	0.00	0.00	0.00	4.10				
December	15.00	0.00	11.20	11.20				
Total	1298.0	850.4	612.9	1099.8				

3.5 Natural calamities

Natural calamities of the watershed for the past 10 years are given below:

Name of Micro Watershed	Code of Micro Watershed	Type of calamities	Very severe/ Severe/mild	Years in which affected	Farm family affected	% of crop area affected
Basera Narayan	2B4D3h3c	Flood	Severe	2012	7	
Dhakka Karamchandra	2B4D3h3b	Flood	Severe	2012	6	
Aladipur Bhatpura	2B4D3h3d	Flood	Very Severe	2012	12	
Needdu Khas	2B4D3h3a	Flood	Severe	2012	8	
Daulatpur Sukhkha	2B4D3e3c	Flood	Mild	2012	5	
Raipur Mulak	2B4D3h1b	Flood	Mild	2012	4	
Kashmiri Abbu Naseerpur	2B4D3h1c	Flood	Mild	2012	2	

3.6 Physiography, Geomorphology and Soils

3.6.1 Physiography of the watershed

The Physiography of Bijnor district is mainly a plain. The physical aspect of the district possesses diverse characteristics. The greater portion of the district is open and highly cultivated. The major part of the district forms a part of the Indo-gangetic alluvium, which consists of clay, sand, kankar and reh. Hard granite is also available near the surface of the Ramganga in the northern part of the district. Due to changing course of flow of Gangas, the adjoining area of the district changes frequently.

3.6.2 Geomorphology

The Geomorphology of Bijnor is quite different, the river after passing through the foot hills of Himalayas debouches in to the plains from Haridwar. The gradient here abruptly changes and owing to it the river current and along with that the carrying capacity of the river decreases abruptly. Hence the river deposits a large quantity of sediment load carried by the flow here forming the alluvial fan. The Sediments deposited here are sorted along the river course from coarser to finer moving from apex in north towards downstream in south. In the northern part of the selected reach the boulders, pebbles and gravels are found embedded in the fine matrix of sand and silt. As the river flows downstream it deposits sand and silt along its course downstream of Haridwar. Most of the part of this selected reach comes with in the area of the alluvial fan developed by the Ganga river. Hence the formations are uncompacted and easily tend to erode by the high current of the river here. This enables the river to erode its banks most frequently and shift laterally forming a wide flood plain. The river exhibits typically braiding near Haridwar and downstream, forming multi-stranded channel separated by channel bars and islands stabilized at places because of the vegetation growth. Further downstream from Haridwar and upstream of the Bijnor Barrage, river shows anastomosing pattern and forms large island between two channels where individual channels show meanders.

3.6.3 Soils

Geotechnically, the district has broadly been divided into two provinces, namely, Alluvium and Piedmont deposit.,The Alluvium province consisting of unconsolidated sediments has high cumulative permeability, low bearing capacity and 1-2 kg/cm compressive strength. The Piedmont,,deposit include unconsolidated boulder sand and silt which show very high permeability, low to medium bearing capacity and 1-4 kg/cm` compressive strength. Both the provinces exhibit foundation characteristics suitable for structures of low unit. There remains the low fringe of khadir along the Ganges to the west. This generally resembles the lowlands that skirt the rivers of the interior, the low flats which adjoin the stream itself being purely alluvial in character, while above them rises a terrace of higher ground extending inland as far as the chain of stagnant morasses lying immediately under the bangar cliff. But the khadir in the district, at any rate in the southern parganas, in of a very poor description and no whit better than that on the opposite bank in Muzaffarnagar and Meerut.

Micro watershed wise soil details									
Sl. No	Name of Microwatershed	Area (ha)	Soil depth	Alkaline (yes/no)	Fertility	Flood	Status of macro nutrients	Status of micro nutrients	
					(yes/no)	(yes/no)			
1	2	3	4	6	7	8	9	10	
1	Daulatpur Sukkha	989.21	>90 cm	Yes	Low	Nill	Organic Carbon and Nitrogen Deficient	Zn Deficient	
2	Raipur	905.23	>90 cm	No	Medium	Nill			
3	Kashmiri Abbu Naseerpur	662.38	>90 cm	Yes	Low	Nill	Organic Carbon and Nitrogen Deficient	Zn Deficient

5	Dhakka Karamchand	2051.48							
6	Basera Narayan	1156.26							
7	Aladipur Bhatpura	2336.50							
Total		9266.59							
1For Soil depth: < 15 cm ; >15 cm < 45 cm; >45 cm < 90 cm; > 90 cm									
2For soil texture: Silty (Si); sandy (S); Clay (C) or write combination of these									
3For fertility status; Low(L);Medium(M);High(H)									

3.7 Hydrology

River Ganga separates Bijnor district and is the main river of the district. Next comes the East Ramganga River. The other rivers of the district are Khoh, Ban, Gangan, Karula, Malin, Ekra, Chhoiya, Pili, Dhara, Panili and Phika.

Details of hydrological details (may be given separately for each village)

iii	Number of defunct tube wells		
iv	Average depth (give range), m		
v	Diameter (give range), cm	15	
vi	Average discharge (cubic meter per second)		
vii	Average working hours per year (hrs)	400 hrs	Depends on Rainfall & Electricity
4	Open dug up ponds		
i	Number of open dug up ponds		
ii	Number of ponds used for irrigation		
iii	Average depth of open dug up ponds (give range also), m		
iv	Average size (give range), ha		

3.8 Human Population

Total population is 147385. Out of these about 75% belongs to General category and 25% are schedule caste.

3.10 Socio-economic aspects

The economic condition of the people is not very encouraging as about 93% family of the watershed is landless, hence their livelihood depends upon the occasional employment they get in agricultural sector or they migrate to the near by city for day to day labour work.. There is large gap among the rich and poor people of the water shed.

About 25% of people are schedule cast and only few (less then 0.10%) belong to schedule tribe. About 7% families are below poverty line. More then 60% family still use fire wood for cooking the meal and only less then 6% use LPG.

3.11 Details of farming community, land less families and families below poverty line

About 60% families of the watershed are land less and about 12% families are below below poverty line. Gram Panchayat wise details are given below:

Sr.No.	Name of Villages	Name of Gram Panchayat	Number of Landless families	Number of farmers with land	Total Family	Number of BPL families

73	Sahabpur	Sadullah Khanpur	30, 3-6 months	Labour & Bakery Workers
74	Sahanpur Navada	Prithi Parbanwari	15, 3-6 months	Labour & Bakery Workers
75	Saidpuri Mehichand	Saidpuri Mehichand	20, 3-6 months	Labour & Bakery Workers
76	Salawa	Salawa	25, 3-6 months	Labour & Bakery Workers
77	Sarak Thal Madho	Mauzampur Suraj	10, 3-6 months	Labour & Bakery Workers
78	Sedha	Sedha	15, 3-6 months	Labour & Bakery Workers
79	Sedhi	Sedhi	45, 3-6 months	Labour & Bakery Workers
80	Shahjadpur Taru	Sadullah Khanpur	40, 3-6 months	Labour & Bakery Workers
81	Shekhpur Bhawra	Chak Shahjani	30, 3-6 months	Labour & Bakery Workers
82	Shekhpur Piththa	Daulatpur Sukha	80, 3-6 months	Labour & Bakery Workers
83	Tapraula	Tapraula	10, 3-6 months	Labour & Bakery Workers
84	Tarkolimadan	Gajraula	95, 3-6 months	Labour & Bakery Workers
85	Tibari	Tibari	60, 3-6 months	Labour & Bakery Workers
86	Wajidpur	Wajidpur	20, 3-6 months	Labour & Bakery Workers

3.19 PRA (Participatory Rural Appraisal)

Participatory rural appraisal (PRA) is an approach used by people to gather information on various aspects from the community in an organized manner without the use of any structured questionnaire. The approach aims to incorporate the knowledge and opinions of rural people in the planning and management of development of projects and programmes. The details of PRA conducted in the watershed along with few photographs are given in the following table:

3.20 List of agencies/projects/schemes presently working in the watershed

The information is given in following table. There are about 5 agencies undertaking welfare activity in watershed.

Agencies/projects/schemes presently working in the watershed			
Sl. No.	Name of the agencies/projects/ schemes	Sponsoring Agency	Main activity
1	MGNREGA	MORD	Rojgar Scheme
2	ATMA(agriculture)	MOA(agriculture)	Crop Production, Tool Implement Distribution
3	Horticulture Mission	MOA(agriculture)	Floriculture ,Vegetable and Plantation
4	SGSY /NRLM	MoRD	Self Employment
5	Regional Fund	State Government	Rural Development

3.21 People institution

3.21.1 Details of list of SHGs formed

The village wise details of SHG formed in the watershed are given in following table. These SHG are mostly in the sector of live stock or handicraft.

3.22 List of UGs formed

3.23 List of members of the Watershed Committee (WC)

The details of member of watershed committee are given below.

Name of Villages	Name of the member	Fathers/Husband's name	Catego ry	Mobile number	Remarks

3.25 Existing Engineering Works

The details of existing engineering works are given below. Field bunding and contour bunding are mostly noticeable in the area.

3.26 Details of Common Property Resources (CPR)

Details of Common property are provided below. This is mostly used for fuel wood and fodder. There is no management followed in these areas.

Name of Gram Panchayat	Type of CPR	Area (ha)	Under the possession of	Existing use*	Existing condition**
Aas Khera Shanjarpur	Vegetative Cover √ /Ponds/Pasture	2.56	Gram Panchayat	fuel wood, fodder	no management
Aladinpur Bhogi	Vegetative Cover √ /Ponds/Pasture	0.75	Gram Panchayat	fuel wood, fodder	no management
Alipur_Bhatpura	Vegetative Cover √ /Ponds/Pasture	1.41	Gram Panchayat	fuel wood, fodder	no management
Bara Khera Chauhan	Vegetative Cover √ /Ponds/Pasture	0.30	Gram Panchayat	fuel wood, fodder	no management
Bhatpana Khushahalpur	Vegetative Cover √ /Ponds/Pasture	2.20	Gram Panchayat	fuel wood, fodder	no management
Chak Shahjani	Vegetative Cover √ /Ponds/Pasture	2.88	Gram Panchayat	fuel wood, fodder	no management
Gajupura	Vegetative Cover √ /Ponds/Pasture	0.92	Gram Panchayat	fuel wood, fodder	no management
Hakimpur Shankarganj	Vegetative Cover √ /Ponds/Pasture	0.73	Gram Panchayat	fuel wood, fodder	no management
Ibrahimpur Lal	Vegetative Cover √ /Ponds/Pasture	0.57	Gram Panchayat	fuel wood, fodder	no management
Jahangira Bad Milak	Vegetative Cover √ /Ponds/Pasture	0.19	Gram Panchayat	fuel wood, fodder	no management
Jamalpur Alam	Vegetative Cover √ /Ponds/Pasture	0.86	Gram Panchayat	fuel wood, fodder	no management
Jamalpur Bangar	Vegetative Cover √ /Ponds/Pasture	0.19	Gram Panchayat	fuel wood, fodder	no management
Kalyanpur	Vegetative Cover √ /Ponds/Pasture	0.94	Gram Panchayat	fuel wood, fodder	no management
Karamchand	Vegetative Cover √ /Ponds/Pasture	6.50	Gram Panchayat	fuel wood, fodder	no management
Kashmiri Abbunasarpur	Vegetative Cover √ /Ponds/Pasture	0.68	Gram Panchayat	fuel wood, fodder	no management
Kaudupura	Vegetative Cover √ /Ponds/Pasture	0.50	Gram Panchayat	fuel wood, fodder	no management
Kirar Kheri	Vegetative Cover √ /Ponds/Pasture	3.20	Gram Panchayat	fuel wood, fodder	no management
Latif Ullapur	Vegetative Cover √ /Ponds/Pasture	1.09	Gram Panchayat	fuel wood, fodder	no management
Mankua	Vegetative Cover √ /Ponds/Pasture	0.89	Gram Panchayat	fuel wood, fodder	no management
Mimla-2	Vegetative Cover √ /Ponds/Pasture	2.20	Gram Panchayat	fuel wood, fodder	no management

3.31 Average productivity of field crop /animal

Crop	Present Yield (Kg/ha)	
	Grain	By product
Paddy	2500	2500
Maize	3000	2000
Bajra	800	2500
Black gram	500	500
Green gram	400	500
Pigeon pea	1000	4000
Wheat	2500	2500
Lintel	700	700
Mustard	700	1000
Pea	1200	1500
Potato	10000	Nil
Onion	5000	Nil
Fodder	-	80000

3.32 Animal productivity

Animal productivity may be given as per table (give details for each village separately)

Animal	Breed	Average weight (kg)	Milk yield (Litre/day)	Meat (Kg/animal)	Egg per year	Fodder/Concentrate				
						Menger	Stall feeding / open grazing	Source of fresh fodder	Concent rate	Any other relevant information
Buffalo	210	300-350	2.50	-	-	-	3.5 kg fodder, 8kg Barseem, 4.6kg saeleg, 1.5kg jowar, 2kg khali, 5kg bone, 5kg salt	Farmer Field	-	-
Cow	180	200-250	1.50	-	-	-	3.5 kg fodder, 8kg	Farmer	-	-

Animal	Breed	Average weight (kg)	Milk yield (Litre/day)	Meat (Kg/animal)	Egg per year	Fodder/Concentrate				
						Menger	Stall feeding / open grazing	Source of fresh fodder	Concent rate	Any other relevant information
							Barseem, 4.6kg saeleg, 1.5kg jowar, 2kg khali, 5kg bone, 5kg salt	Field		
Bullock	-	250-350	-	-	-	-	3.5 kg fodder, 8kg Barseem, 4.6kg saeleg, 1.5kg jowar, 2kg khali, 5kg bone, 5kg salt	Farmer Field	-	-
Goat	-	10-15	-	7 – 10	-	-	1 kg whole grain, 1kg pelleted grain	Farmer Field -	-	-
Sheep	-	-	-		-	-	-	-	-	-
Pig	-	30-35	-	25 – 30	-	-	-	Farmer Field -	-	-
Poultry	-	2-3		2 – 3	250	-	-	Farmer Field -	-	-
Duck	-	-	-	-	-	-	-	-	-	-
Fish	-	-	-	-	-	-	-	-	-	-

3.33 Existing trees in the Gram Panchayat

The exiting trees under various Gram Panchayat are provded in following table.

Sl. No.	Name of Gram Panchayat	Along with River Side	Along with Perennia 1 Stream	Along with Seasonal Stream	Along with Canal	Along Road Side	Total

Chapter 4: The problems and need of the area

4.1 Crop productivity/soil and land degradation, soil and water conservation problems

At present, the condition of the life of the people living in villages is gloomy. The problems of the villagers are many and varied. A lower productivity of main crops in most areas of the watershed, lack of diversification in agriculture from low value to high value crops, inadequate and inefficient infrastructure for development in rural areas and lesser employment generation in the other more remunerative sectors of the economy. Unless the development process in the state addresses these basic reasons in a satisfactory manner, the growth in agriculture and for that matter, in the economy as a whole will not pick up to the desirable level nor will the burden of population on agriculture for its livelihood reduce. There are several other factors, which require immediate consideration such as the consistent increases in the number and area of uneconomic and non-viable agricultural operational holdings, inadequate and inefficient irrigation network, inadequate development of rural infrastructure, more particularly of roads and lack of proper and adequate marketing and storage facilities with little contribution from agro-processing units.

About 61% people in the watershed are literate. 68% male and 52% female are literate. In comparison, females are less educated in number than males. Mass education should be spread by establishing more primary and secondary schools. It must be made both compulsory and free for the females and the males as well, so to improve the economic condition of the watershed. The economic condition of the people is not very encouraging as about 93% family of the watershed is landless, hence their livelihood depends upon the occasional employment they get in agriculture sector or the people of the watershed busy in making the furniture from bamboo wood or they migrate to the nearby city for day to day labour work, agriculture should be modernized, to get more benefit and profit in the agricultural sector. Vegetable and fruits preservation techniques need to be taught for the future use. Villagers should be educated regarding elementary hygiene and scientific method of cultivation, as to get healthy results of crop.

The family size in the villages ranged from six to eight with at least four children in most of the households. This holds true for all castes and religions. The high population growth rate has translated into a high rate of unemployment. The family planning programmes implemented through the public health centers (PHCs) and serviced by the ANMs are reported to be working well. However, these services need to be improved.

In the district of Bijnor, the disparity is clearly seen with highly progressive and prosperous farmers as well as poor tribal farmers who seem to be totally unresponsive to any of the above programmes. Tribal farmers still grow indigenous crops with low yields, low marketed surplus and low farm incomes; they consequently find it hard to save. These farmers also operate on a low capital base in spite of tribal credit facilities that are available to them now that commercial banks have been nationalized. Another major reason is the attitude and values of tribal people to the whole business of farming and the use of modern agricultural inputs such as HYV seeds, fertilizers, irrigation, machinery and credit from outside the farm. In order to take appropriate policy measures to mitigate the poverty and backwardness of tribal farmers, it is essential to identify and quantify the socio-economic factors behind their situation.

Females of the watershed help in farm operations and cut wood from the forest. They also keep cows, buffaloes and poultry. They also keep kitchen gardens, collect tendu patta, make ropes and do carpentry. It is the women make purchases from the market and decide on the finances involved in the marriages of their children. Thus the women have the dominating role in the district. The women are keen observers of festivals and like to visit fairs. Both men and women smoke and drink on a large scale. In their leisure time, they get together in small groups and discuss village affairs and casual scandals.

There is the manufacturing of cane & bamboo product like furniture etc. Various cottage and small-scale industries in the district are dependent on the supply of different kinds of cane and reeds. Cane is also found in abundance almost throughout the state. There are a few more varieties of bamboo and cane used for manufacturing of different products. A kind of muli bamboo locally known as 'muli bazail' is used for making umbrella handles. Two other varieties of bamboo locally known as 'Mrithinga' and 'Bethua' and different varieties of canes locally known as 'sundi', 'barjali', 'harua', 'golla' etc. are required for making furniture and baskets. Various types of cane and bamboo products are found in this state. The people of the plains and hills districts of Bijnor have their own bamboo and cane products with distinctive features and typical designs. The products of the plain districts differ from that of the hill districts in use, shape and design.

It is found that a variety of products like bamboo mats, sital pati, baskets of various sizes and shapes, winnowing trays, sieves, japi or chatta, various types of fishing implements, etc. are manufactured in large numbers in the plains districts of the state. The cane and bamboo products used for domestic purposes are prepared in every nook and corner of the state out of split bamboo and fine flexible cane strips.

Every Watershed should have a hospital or a primary health centre for providing medical aids to the villagers. Rural banking should be set up for financial assistance to the village people. A good network of roads is the first and foremost requirement for development. It not only makes it easier to transport goods and services but also saves on time as well as costs. Moreover, it facilitates the flow of information and knowledge. The construction of rural roads and programmes of village connectivity have received considerable attention in the past few years in the state.

4.2 Socio-economical problems and gaps

Income generation, economic growth and environmental security were identified as the major issues to be addressed in the watershed area. Average productivity of major crops like wheat, paddy, potato and sugarcane in district Bijnor is higher as compare to the state's average productivity, excepting average productivity of oilseeds, in the district, compared to that of the state. Despite higher productivity of cereals, potato and sugarcane, majority of farmers in the district are facing acute problems due to small land holdings and irregular payment by sugarcane factory owners, weather plays a crucial role here. After months of hard work, when the crop is ready to be harvested, untimely rains just damage the yield which leads to huge losses. Agriculture being a labour intensive job, people spend so much of time in the fields yet it ends up giving negligible returns at times. The village needs to have co-operative societies and government assistance to regulate buying and selling of agricultural produce. Most of the farmers go to the nearby town to sell their products at throw away prices and later small shops from this village buy it from those traders, who sell it at much higher prices. So ironically people in the village end up paying more for their own produce. So it is becoming very important to find an alternate and steady income.

It has been observed during survey that drainage system in almost all the villages is very bad. Polluted water flows in the open drainage, which is the source of mosquitoes and related diseases in the area. Out of total surveyed villages, only five villages having all weather Pucca roads. In rest of the villages, condition of road is very poor, which is full of garbage in both the sides. Heap of garbage is the cause of many diseases in the area. Health facilities are very inadequate in the rural areas. No primary health centres (PHCs) or sub-centres are located within the village or nearby villages. People have to go to block headquarters for treatment. The frequency of visit of medical officer, lady health visitor and malaria inspector is less in almost all villages in the district.

Government schools are poorly maintained and drop out cases are alarming. It becomes even serious as we move from primary level to the higher levels. Children have been sent to the schools only to receive scholarship and mid-day-meal (MDM). Most of the children are forced to earn money by their parents largely due to poverty. Maximum girls in the watershed have left the schools after upper primary due to unavailability of higher secondary schools in the village or nearby villages. Higher secondary schools are far away from villages (average 5 km.). Due to social reasons, girls are forced to stay back in their houses and learn the traditional domestic chores. Landless and marginal farmers have been pushed in the background, and they are depending on agricultural labour and rudimentary village industries with no surety of regular employment. Irrigation by canal and government wells is almost negligible in the district. Most of the irrigation is done by private tube wells.

4.2.1 Details of SWOT Analysis

Details of Strength, Weakness, Opportunities and Threats (SWOT) are given below.

Parameter	Strengths	Weaknesses	Opportunities	Threats
Community	<ul style="list-style-type: none"> 1. Women's active involvement in farm related activities, in handicraft works from bamboo woods. 2. Household is significant feature and women are involved in most of the operation in agriculture including subsidiary enterprises like dairy and poultry etc. 3. Most of the women farmers irrespective of their category are hard working in the farm activities and have excellent knowledge of agriculture. 	<ul style="list-style-type: none"> 1. Lack exposure of knowledge of banking and credit cooperatives. 2. Women do not have much say on policy issues of the activities. 3. Limitation of technically trained female extension workers. 4. Female workers do not impart knowledge on household activities, child care, nutrition etc. 5. Unequal wages between male and female workers. 6. Role of women in the watershed programme is not specified. 	<ul style="list-style-type: none"> 1. Making of self help groups with small savings and provision of loans by revolving fund on small enterprises related to the agriculture. 2. Awareness among the women to improve their skill and knowledge of micro-watershed based development programme. 3. Watershed development team has technical women to train women of watershed and availability of some voluntary organizations for the purpose. 4. More and more women are coming forward to carry out development work in micro-watershed. 5. Women's potential and capabilities have not been exploited due to lack of specific growth opportunities 	<ul style="list-style-type: none"> 1. Change in social functioning and relationship. 2. Male farmers may not provide opportunities to farm women for more rights.
Physical infrastructure	<ul style="list-style-type: none"> 1. Good network of road 2. Electrified village 3. Primary and Secondary School building 	<ul style="list-style-type: none"> 1. Lack of sufficient road side plantation. 2. Insufficient electricity supply. 	<ul style="list-style-type: none"> 1. Plants are available in nearby nurseries. 	<ul style="list-style-type: none"> 1. Unauthorized forest dwelling.
Facility	<ul style="list-style-type: none"> 1. Availability of school, Angan Wadi Centres (AWC), hospital and drinking water. 2. Fair educational status of the villagers 	<ul style="list-style-type: none"> 1. Poor animal health facilities. 	<ul style="list-style-type: none"> 1. Market opportunity due to nearness of Lucknow city. 	<ul style="list-style-type: none"> 1. Quality control and adulteration.

Technology	<ul style="list-style-type: none"> 1. Farmers know the concept of cash crops 2. Villagers know the importance of natural resource 3. Project area has number of institutions under Central/ State Govt. viz. ICAR, CSIR, SIRD, SAU's Agriculture college, and Technical university etc to backup the development programmes. 	<ul style="list-style-type: none"> 1. No significant efforts have been made to generate women specific and women friendly farm technologies. 2. Technical knowhow is low. 3. Communication gap. 4. Lack of technical personnel at block /grass root level. 	<ul style="list-style-type: none"> 1. Great desire for the use of modern techniques in agriculture. 2. Scope of new cropping pattern and irrigation methods/ soil improvement /development of cash crops and horticulture. 3. Conservation and utilization of natural resources (with particular reference to water and forest). 4. Compact areas having cheap, hardworking and labour force. 5. Adequate availability of raw material for processing industries. 6. The activity will encourage the export of fruits, vegetables which will provide better returns to the farmers as well as foreign exchange. 7. The approach will also be helpful in minimizing the post harvest losses during the handling of produce. 	<ul style="list-style-type: none"> 1. Reduced productivity in the absence of improved technology. 2. Inadequate infrastructure for quality management and quarantine. 3. Degradation of environmental issues with respect to safe/organic produce for consumers.
Livelihood	<ul style="list-style-type: none"> 1. Market are available for skilled and unskilled labor 2. Most of the farmers are small and marginal. 3. Some households have livestock. 	<ul style="list-style-type: none"> 1. Lack of awareness regarding pre and post harvest management practices. 2. Lack of proper marketing infrastructure and strong marketing system having forward and backward linkages. 3. Prevelence of traditional cropping systems, substantial increase in area, production and productivity in major crops since last plan period. 	<ul style="list-style-type: none"> 1. Vast opportunity to attract youth towards farming sector. 2. Great opportunities in dairy, farming practices, horticulture, poultry, fruit preservation and other sectors. 3. If provided with livelihood options the income level of the households can be increased livelihood status and Quality of life. 	<ul style="list-style-type: none"> 1. Reduced productivity in the absence of improved technology. 2. Less interest in agriculture.

Micro-Enterprises and production systems	<ul style="list-style-type: none"> 1. People have the basic skills. 2. Organized microenterprise activities exists in the area 3. Natural resources for enhancing microenterprises and production are available in the watershed. 	<ul style="list-style-type: none"> 1. Lack of management skills. 2. Lack of technical support. 3. Lack of organized marketing facilities. 4. Lack of producer federation. 	<ul style="list-style-type: none"> 1. If provided good technical support and motivation, they can run the units in an organized way and income level will increase. 	<ul style="list-style-type: none"> 1. Farmers may loose interest in agriculture.
Natural Resources	<ul style="list-style-type: none"> 1. Productive land and flora and fauna. 	<ul style="list-style-type: none"> 1. Prevalence of soil erosion. 2. No maintenance of water storage bodies. 	<ul style="list-style-type: none"> 1. If used advanced techniques like field bunding and use of organic manure, productivity may be increase. 2. 4.2.2 Details of gap analysis

The gap analysis is given below.

S.N	Gaps	Strategies to overcome the gap
A Paddy		
1	Delayed transplanting.	Adapt SRI
2	Inadequate plant population in traditional cultivation methods.	1. Adapt 20x15 or 20x10 cm for traditional method and 30x30 or 25x25 cm for SRI method.
3	Lack SRI method	Promote SRI
4	Heavy yield losses due to delayed weeding.	1. Promoting use of butachlore/ pendime thaline/ bangiocarp one weak after transplanting. 2. Weeding with cona weeder 15-20 days after transplanting
5	Attack of insects-stem borer, plant hoppers, gandhi bug etc.	1. Timely transplanting. 2. Use of pesticide in proper time.
6	Disease incidence-Khaira disease, blast, leaf bright, false smut, brown spot.	1. Use of zinc. 2. Use of fungicide.
7	Labour crises for weeding, transplanting and harvesting.	1. Use paddy transplanter. 2. Promote mechanization.
8	No use of cona weeder.	Promote conaweede
9	Crop damages due to flooding, water-logging and drought (erratic rainfall).	1. First irrigation 2 days after transplantation 2. Keeping moist soil condition.

10	Widespread deficiency of Zn, and Fe.	Use Zn, and Fe.
11	Imbalance crop nutrition.	Judicious use of organic matter and chemical fertilizer
12	Low percentage of seed replacement.	Promote seed replacement.

B. Wheat

1	Considerable area under late sowing.	Timely sowing
2	Disease incidence-leaf blight, smut, ear cockle, karnal bunt, rusts.	Use of fungicide
3	Weed menace-Phalaris minor, wild oat and other weeds.	Use of isoproturon or other weedicide
4	Mostly flood irrigation.	Use of basin irrigation method
5	Lack of suitable varieties for rainfed and late sown conditions.	Sowing of late sown variety like -DBW-14, HUW-234, Triveni (K-8020), Narendra wheat—1014 and K-9423
6	Imbalance fertilizer use.	Judicious use of organic matter and chemical fertilizer
7	Mostly cereal based cropping system followed (Rice-wheat or Maize-Wheat)	Leguminous crop must be included in crop rotation
8	Less use of organic manures.	Judicious use of organic matter and chemical fertilizer.
9	Inadequate power supply for irrigation and threshing.	Use alternate resources
10	Labour shortage during harvesting	Use harvesting equipment.

Chapter 5: Recommended management programme

5.1 Arable land (rainfed/irrigated)

5.1.1 Agronomic practices

- i. High yielding variety
- ii. Major crops proposed/rotations/cultural operations/recommended conservation practices/proposed manures and fertilizers, green manuring
- iii. Use of improved implements
- iv. Plant protection measures
- v. Yield and cost of cultivation of major crops
- vi. Irrigation

5.1.2 Engineering measures in arable land (Class wise i.e. I, II, III and IV)

- i. Proposed measure and its justification
- ii. Specification of individual measures with plan and design calculation
- iii. Drawing with plan, section, elevation may be give
- iv. Estimate of the work

Note: Engineering design of each work will include hydrological design, hydraulic design and structural design

5.2 Non Arable land

5.2.1 Agronomic practices of Orchard and plantation

- i. Type of orchard/plant with spacing, pit size, soil working and planting
- ii. Fencing type
- iii. Management practice
- iv. Cost of raising orchard/plantation
- v. Yield.

5.2.2 Engineering measures in non arable land (Class wise i.e.V, VI, VII, and VIII)

- i. Proposed measure and its justification
- ii. Specification of individual measures with plan and design calculation
- iii. Drawing with plan, section, elevation may be give
- iv. Estimate

Note: Engineering design of each work will include hydrological design, hydraulic design and structural design

5.2.3 Diversion drain/interceptor drain/grossed waterway

- i. Alignment of each drain to be shown on map
- ii. Design (cross section of each)
- iii. Estimate

Note: Engineering design of each work will include hydrological design, hydraulic design and structural design

Chapter 6: Proposed interventions

6.1 Soil management and landuse

Deteriorating soil health is a serious problem in project area. Not only the organic matter is low but also imbalance of major nutrients NPK and micronutrients have telling effect on crop yields. The large part of cow dung is being used as fuel and not for farmyard manure. To improve upon the soil health and nutrient imbalances, two components are proposed:

- Improving soil health through green manuring.
- Demonstrating nutrient management through Integrated Nutrient Management (INM) system.

Above two components are proposed to be run as given below:

(i) Enrichment of organic carbon content using green manuring

- Green manuring can be an important intervention to cope up with the problem.
- Green manure crops such as daincha, sunhemp, and cowpea etc not only fix nitrogen but also add organic carbon. It is proposed to provide seeds of green manure crops to selected farmers.

(ii) Establishment of Integrated Nutrient Management (INM) system

Balanced use of plant nutrients is essential for sustainable intensification of agriculture. The goal of INM is to promote balanced use of plant nutrients, so as to increase crop productivity in an efficient manner. Few demonstrations of 0.40 ha will be conducted in every gram panchayat.

6.2 Efficient use of water resources and management

Since the availability of water supply is the major constraint in the project area, there is an urgent need to promote water conservation and efficient on farm water management practices to improve the productivity per unit of water consumed. Under this programme the following components are proposed:

(i) Adoption and promotion of precision farming techniques through micro irrigation

Micro irrigation system enhances irrigation and water use efficiency. It also helps in increasing the fertilizer use efficiency. Being one of the main components of precision farming, it can be of great help for small and marginal farmers. Under capacity building module this component will be addressed.

(ii) Demonstration cum training of ridge and furrow system and SRI of paddy cultivation for increasing water use efficiency and eco-friendly cultivation

Paddy is generally cultivated in puddle fields and is transplanted in standing water. Recently a new technique “transplanting of paddy seedlings on both sides of ridges under non puddled conditions” has been reported to have given good yield with only 50 percent quantity of water use along with efficient utilization of added plant nutrients and better micro-climate which reduces the incidence of pests and diseases. Also, this method improves the soil texture and soil health, with lesser pollution of ground water. The weed problem under this technique can effectively be controlled with the use of new herbicide (s) and with no residual effects on succeeding crops. In this method, bed planter is used for preparing ridges on well-prepared field. Three to four weeks old seedlings of paddy are transplanted on both sides of ridges, keeping a distance of fifteen centimeters between the seedlings, ten centimeter above the

bottom of the furrow. Thus 33 seedlings per square meter will be maintained as in case of conventional transplanting. It is proposed to conduct demonstrations of this technology to convince the farmers that water can be saved in paddy cultivation without compromising with the yield. Similarly SRI will be useful to save water and fertilizer without compromising crop yield. Each gram panchayat will be provided a bed planter for conducting demonstrations and a total sum of Rs. 30,000.00 shall be spent on each of such trainings.

6.3 Seed and planting material

Seed is the most crucial agriculture input for improving the production and productivity of crops. Better seed replacement ratio coupled with proper seed treatment can largely contribute to improve the yield of crops per unit area. Similarly availability of high quality planting material for horticulture crops can improve their productivity. The following interventions are proposed to be taken up under this programme:

(i) Establishment of seed treatment and demonstrations units at gram panchayats level for early and high germination rate to increase crop yield

The concept of seed treatment is the use and application of biological and chemical agents that control or contain primary soil and seed borne infestation of insects and diseases which pose devastating consequences to crop production. Seed treatment ensures crop safety, leading to establishment of healthy and vigorous plants resulting in better yields. The benefits of seed treatment are as follows:

1. Increased germination
2. Ensures uniform seedling emergence.
3. Protect seeds or seedlings from early season diseases and insect pest thereby improving crop emergence and its growth.
4. Improved plant population and thus higher productivity.

Presently, 70% requirement of seed is met from the farmer's own stock which goes for sowing without seed treatment. The demonstrations and training on seed treatment will be conducted at gram panchayat level. The demonstrations will be conducted in 0.25 ha area and the farmers will be trained simultaneously on the techniques of seed treatment. Component of seed demonstration unit are:

Item	Area/Number	Cost in Rs
Fungicides	0.4 ha	50
Seed treating Drums	One	1150
Operational Charges/ demonstration (Rs. 2000 /demonstration)	0.4ha	2000
Total	-	3200

(ii) Production and supply of quality seeds and planting material for improvement of seed replacement rate (SRR)

The major field and horticultural crops of the project area are wheat, potato, pulses, rice and vegetables, where replacement of seed and planting material can boost the production and productivity. This programme is required to be taken up in a project mode. Except for hybrids maize, rice and vegetable crops, the farmers can produce the certified seed/ foundation seed stage-2. It is proposed that the farmer may get his crop inspected, so

that instead of certified seed, he is able to produce foundation seed stage-2 so as to meet the desired seed replacement requirement. The government may provide foundation seed to one fifth of the farmer every year. The seed produced by these farmers will be supplied to the next group of farmers during subsequent years.

To support nutritional kitchen garden as well as production of high value crops by small and marginal farmers, special emphasis is required to be given to provide high quality vegetable seeds to the farmers.

(iii) Seed replacement

Seed is the single most critical input in production. High quality seed is likely to increase production by 10 -15 % with following additional benefits:

- Quality seed and planting material will become available to the small and marginal farmers particularly of high value crops to boost their profitability.
- The seed borne diseases and insects can be controlled at a minimum cost by seed treatment and it is expected that farmers of all strata will be benefited and their income shall be raised by 10 - 30 %.
- Proper management of insect pest and diseases by seed treatment will reduce environmental pollution.
- High quality planting material will result in better quality of horticultural and agricultural produce, thus higher returns to the farmers.

6.4 Technology dissemination

The present agriculture extension system is not designed to meet out the integrated requirement of the farmers. It is required that for reaching out every farm unit a new programme *i.e.* based on information and communication technology (ICT) be adopted. The outline of the programme is given here under:

(i) Publication and mass campaign for resource development of agri and allied sector using ICT

The publication, training and mass campaign system has a vital role in the overall development of agriculture and allied sector. According to the multidimensional needs of the farmers, the publication, awareness and mass campaign with the full support by training will provide extra and latest information to the farmers in their respective fields as and when required. Therefore, to make timely available and proper use of printing materials and electronic media related to every modern technology can be passed on very quickly up to the grass root level (learning by doing and seeing by doing) and to cover every village of the entire project area.

(ii) Farmers study tour within and outside the state for exposure and motivation towards commercialized agriculture

In order to induce competitive instinct in the minds of farmers of lesser developed areas, it is essential to expose them to well developed pockets of U.P. in first stage. These visits will strengthen the confidence of farmers in new technologies and see the practical adoption of new technologies.

Personal interaction and listening to success stories from horses mouth will change the mind set and to adjust the changes in their own package of practices. In district the progressive farmers will be included in the proposed study tour. Various agriculture segments for improvement will be selected like: fish culture by visiting East U.P; higher production of potato from success story of Kannauj/Farrukhabad/Agra, etc; better mechanization of farms of West U.P. Additionally farmers could also visit other states like: Maharashtra & Valsad (Gujarat) to see the organized mango cultivation, Nasik for grapes and onion, Star for ginger cultivation, and Haryana/ Punjab/ Gujarat for dairy etc.

(iii) Training and demonstrations of weed management in major crop to reduce the yield loss

The association of weed with the crops is well known because weeds compete with the crops for various growth factors like light, space, nutrients, moisture etc. The competition of weeds reduces the crop yield from 15 to 25 percent depending upon the type of weed flora, its intensity and duration of competition. The introduction of dwarf genotypes with the high inputs use like fertilizers and irrigation requirements has further aggravated the weed problems. The project will consist of training and demonstrations on chemical weed control in major crops of the region.

(iv) Farmers training for seed production at *Krishi Vigyan Kendra*

KVK/ KGKs/RIRD are very prestigious units/Institution in the district, which provides latest production technology to the farmers by different ways. To provide latest information and training to the farmers, it is necessary that KVK/ KGK/RIRD are kept up to date, so that, farmers can utilize their services and advise and adopt latest techniques on their own farms.

6.5 Farm mechanization

Farm mechanization plays very vital role in timely and precision performance of different farm operations. In areas of intensive agriculture i.e. where two or more than two crops are taken in a year, use of machinery can greatly enhance the productivity by timely performance of various agricultural operations and thereby improving the input use efficiency. But, this is the most capital-intensive agricultural input. The various interventions proposed are as follows:

(i) Demonstration of farm mechanization at gram panchayat level to minimize the energy loss of human resources

Interaction with village panchayats in the project area revealed that there is need to make available farm machinery to small and marginal farmers. However, they cannot afford to purchase costly farm machinery as it will not be economical for their smallholdings. Further lack of farm machinery at small farm brings drudgery on farm women. To meet the requirement, village level cooperative societies or farmers clubs, or entrepreneur will be encouraged to purchase the machinery and made will be made available to the farmers on custom hiring basis.

6.6 Horticulture

(i) Promotion of protected cultivation of vegetable crops under low tunnels for early production of vegetables

Majority of farmers in project area are small and marginal and their holdings are uneconomical. If provided with capital support and know how, they can compliment production of cucurbits out of main season in protected structure like low tunnels. The cost of material for erection of low tunnels including plastic for one hectare is Rs. 50,000. Small and marginal farmers have very small holding and it is expected that not more than 500 sq mt areas shall be put under plastic tunnel at one time. The cost for 500 sq mt. per farm unit works out to be Rs. 2500.00.

Objectives:

To start early crop of vegetables when the season is still cool will help off-season production of vegetables for higher profits. The productivity of vegetables is very high in the region which will increase cash flow to farm women. Insect – pest and disease management can be done more efficiently. Vegetable being high value crops, a better protection from weather conditions ensures crop safety and safeguards against crop failures. Higher vegetable production leads to better nutritional security. Use of low tunnels for raising nurseries of winter vegetables under protection ensures production of quality planting materials and safeguard for expensive composite seed.

(ii) Demonstration and supply of healthy nursery raising in vegetable crops

Vegetable crops including onion, cole crops, capsicum, chillies, tomato and brinjal are raised through nursery. All these crops are high value and highly productive. They suit to small and marginal farmers and especially it is the women who take care of vegetable production. Healthy nursery of these vegetables ensures the success of vegetables production venture. It is therefore proposed to train the farmers on the practices of raising healthy nursery.

Objectives

- To raise healthy nursery of the high value crops through high quality seed to ensure crop success.
- To provide quality-planting material and costly seeds i.e. hybrids.
- To boost the income of small and marginal farmers.
- To increase cash flow to farm-women through raising quality nursery of vegetables crop for own use and for sale to other farmers.

Technology

Small raised beds of 3 meter x 1 meter x 10 cm are prepared. Well rotten FYM or vermi-compost is added to each bed. The beds are drenched with formalin solution (1 part formalin and 7 part water). After doing so the beds are covered with polythene sheets and left as such for one week, so that, formalin fumes get deep in to the soil and it is sterilized properly. The covering with polythene also ensures solar sterilization of soil. After one week the polythene is removed and the soil is raked number of times for at least one week, so that, formalin fumes are completely driven out. As a check, a handful of soil is taken out from the bed and smelled to feel if there are any fumes of formalin smell left in the soil. Just in case, if the soil still smells of formalin it should be left for another two- three days and further raking of soil may be done. Normally, it takes 2-3 weeks time to prepare the nursery bed and sterilized them for sowing of seeds. Therefore, bed preparation programme should be started at least three weeks in advance of actually planting the seeds in nursery beds. Since the

vegetable seeds particularly hybrids are very costly, healthy nursery is very important. Further, it should be kept in mind that the seeds are sown in line and it should not be congested. If required low plastic tunnels can be prepared to protect valuable nursery seedlings.

The cost of raising ten nursery beds each of 1m x 3m diameter is given here under:

Hybrid/OP seeds, formalin, FYM, vermicompost, fertilizers, polythene sheets, polytunnels	Rs. 5000
Fifty man days for preparation of beds and nursery-raising for one month	Rs. 5000.
Total	Rs. 10,000

(iii) Development of nutritional kitchen garden/back yard garden for balanced nutrition at village level and involvement of women in horticulture.

Rural people particularly women and children suffer from lack of vitamins and minerals. Nutrition garden can play an important role to solve this problem, besides this, nutritional garden also ensure economical and nutritional security. On an average eight member family shall require 2.4 kg vegetables and 800 g fruits per day. This production can be obtained from 500 sq mt. area. Five villages from each block of the district will be selected and one kitchen garden will be laid out in each village each year. They will be provided with input and training to raise the kitchen garden. Besides seed kits of summer and winters vegetables, three fruit trees (amrapali, papaya, citrus and guava) shall also be distributed to each.

6.7 Commercial fruits

(i). Promotion of rejuvenation of senile, old and unproductive orchards of mango and guava

PRA survey reveals that quite a good percentage, about 20-35% of orchards are unproductive in the project area. Due to this, the productivity of these fruit crops in the region is quite low (6.2 tons/ha). Therefore, rejuvenation of such orchards is required on priority to increase productivity, ensure export competitiveness and to take advantage of global opportunities. The technology of rejuvenation of both mango and guava is given below:

(a) Mango: Rejuvenation of mango gives a new productive life of 20-30 years. Like other fruit crops, mango trees also witness decline in productivity after certain age and orchards become unviable. The technology of rejuvenation has been worked out and demonstrated by CISH, Lucknow. The technology aims at pruning of undesired branches for inducing development of umbrella like open canopy of healthy shoots which ensures better light penetration and improves flowering and fruiting potential. Pruned trees attain canopy of healthy shoots in two years time and after three years onward they start bearing fruits. The technology involves pruning of undesired branches from a height of 4-5 meters from ground during month of December. Four to medium sized branches with outward growth are retained for basic framework of tree for the development of canopy. Other criss-cross, intermingling, dried and diseased branches are marked for complete removal, which is also done in month of

December. Branches for canopy development are pruned at a distance of about 75 cm at their base.

Immediately after pruning, fungicidal paste should be applied on cut surfaces to check microbial growth. It is observed that alternate row pruning is much more acceptable to growers as there is less economic loss and the availability of better light to un-pruned adjacent rows which greatly increases their fruiting potential. Apart from this, pruned trees are to be provided intensive care of nutrition, irrigation and management of insect, pests and diseases. Five to six months after pruning, outwardly growing 8-10 healthy shoots need to be retained per branch. This operation is done during June to August. If the orchard is of inferior variety, then the branches (new shoots) can be grafted with improved variety, which is called as "top working". Total cost involved for rejuvenation per tree is Rs. 133 to 160. Pruned trees have been found to have 2-3 times higher average yield than the control plot in which pruning is not done.

(b) Guava: The unproductive old orchards which produce low-grade fruits need to be rejuvenated through heavy and systematic pruning followed by proper nutrition, irrigation and plant protection measures. Heading back of unproductive guava orchards is done in the month of May followed by judicious thinning and pruning of newly sprouted shoots in the month of October. The newly emerged shoots after October pruning are found to be very conducive for flowering and fruiting in the following season.

Assistance under National Horticulture Mission (NHM)

This activity has been adopted by NHM and assistance norms are 50% of the estimated cost of Rs. 30,000/ha subject to a maximum of Rs. 15,000/ha limited to 2 hectares per beneficiary.

(ii). Promotion of high density planting of guava fruit crops

Although India is the largest producer of guava, however yields are very poor varying from 6.2 tons/ha in mango and 11.0 ton/ha in guava. The main reason for low yields are wide spacing, low penetration of improved varieties and poor management practices. Even countries like Brazil, Mexico and Egypt harvest yields up to 9.2 tons/ha to 16.0 tons/ha in mango. It is a common practice to plant guava at a spacing of 8m × 8m between rows and between plants within rows. With the wider spacing it takes 7-10 years to fill the space between plants. Thus there is tremendous scope for increasing orchard productivity by increasing planting density. Along with high planting density, early height control and canopy management are essential to control vegetative growth and to achieve desired results. Researchers conducted at Central Institute for Subtropical Horticulture at Lucknow has revealed that a spacing of 6.0m × 3.0m is most favourable. In this case also, yields of the order of 15-16 tons/ha can be easily obtained with Allahabad Safeda variety.

6.8 Proposed intervention for livestock

The livestock sector is an important sector of agricultural economy of the state and accounts for about one fourth of the net state domestic product. The opportunities in improving the performance of this sector are much more as compared to crop sector as the farmers are already practicing dairy and backyard poultry to supplement their income.

To increase the productivity in animal sector the major contribution rests on the genetic up-gradation of livestock. So far as dairy development is concerned, induction of

additional milch animals and transforming the backyard dairy units into commercial dairy farms with minimum ten animals is required. Farmers training for better herd and milk management need to be done through latest techniques and farm practices.

(i) For year round production of green fodder to

It has been realized that seed is the most limiting factor in fodder production. The fodder crops being very shy seed setters, sufficient quality of good seed is not available. In the present situation, the berseem seed costs approximately Rs. 100 /kg and 20 kg seed is needed for one hectare. Accordingly following norms for fodder seed production and seed acquisition by the government for further distribution will be followed. Barseem seed will be distributed to registered farmers having mixed farming system @ 4 kg / farmer costing Rs 400.

(ii) Cattle shelter

Cattle shelter will be provided under MGNREGA fund.

(iii) Promotion of Goat Rearing

Goat rearing is common in almost all gram panchayat in project area. Goat is used both for milk and meat purpose by the people. During last five years 90% of meat consumption in the district comes from goat. There is a need for promoting goat rearing. To promote goat rearing goat shelter will be provided.

(iv) Dairy Training Workshop for Women

The first step will be to sell the idea of dairy farming aggressively in the target area. This will be done by holding dairy training workshops extensively in the district, so as to cover the entire area repeatedly. These will be high tech camps wherein the requisite message will be passed across the audience in a very cordial, conducive and friendly environment. Dairy training workshop will be conducted to encourage and equip with knowledge to prospective dairy farmers and 50 percent target beneficiary should be women.

6.9 Works under Production system

Chapter 10: Consolidation and post-project management

Watershed development projects can render sustainable production through the execution of rain water management programme with appropriate combination of environmental balance, community participation and institutionalization of process. The strategic planning for the post project management is elaborated as under:

10.1 Activity of consolidation and post project management phase

SL. No.	Activity
1	Preparation of project completion report
2	Preparation of GPS based inventory of developed infrastructure
3	Documentation of success stories
4	Preparation of feed back and suggestion note for watershed committee
5	Documentation of procedure for management and utilization of infrastructure developed under the project
6	Documentation of procedure for mainetnance of infrastructure developed under the project
7	Documemtation of utilization of of watershed development fund (WDF)
8	Documentation of quality and sustainability issues

10.2 Adoption of eco-friendly conservation measures

The conservation measures taken up in the watershed should be long lasting with sustainability. Along with engineering measures, efforts would also be made to reinforce the vegetative cover around the earthen structures, on the slopes, on bunds, and on barren lands through protection of the process of natural regeneration and by planting appropriate vegetation with combination of grass/shrubs and trees. The stream banks would also be vegetated and stabilized to create a buffer zone between land and water body. Such vegetation and physical measures helps in stabilizing streams banks, augmenting ground water recharge and improving the riparian habitat.

The diversity of watershed development measures is the key to sustainability. Combination of drainage line management, agro-horticulture and forestry measures including plantation of shallow and deep-rooted plants, fast and slow growing plants, productive and medical plants and herbs will be encouraged. The watershed development measures will ultimately help recharge the rainwater to the ground water, improve soil moisture optimally and provide tangible and intangible benefits to the community and environment as a whole.

Land use pattern will go hand in hand with carrying capacity of the watershed. Optimum use of water and increased use of organic fertilizers is the key to conserve the precious land sources. Excessive fertilization and over irrigation leads to permanent damage of soil, land and groundwater. It is important to maintain soil quality through crop management. Crop diversity, intercropping, and crop rotation help in improving the micro flora and fauna present in the soil and maintaining the healthy symbiotic subsystem relationship. Extensive use of measures like Integrated Pest Management (IPM) and Interated Pest and Nutrient Managemnt (IPNM) would be practiced.

10.3 Participation of local community in development and management

During the planning phase the local peoples' participation will be ensured and it is planned that the involvement during implementation and post project maintenance will be

maintained. However, participation without empowerment does not help in achieving sustainable development. Community will be made aware of different concepts and options for their livelihood and natural resource management. Local wisdom is important in understanding rural dynamics that includes the interface between human behaviour and its economic/ecological implications. The interest among the community will be created and maintained by adopting the measures in such a manner that they provide immediate, medium and long term benefits to the community.

10.4 Institutionalization for post project management

A dynamic institutional arrangement is necessary for project management, facilitation of benefit sharing and maintenance of the resources. This is usually achieved through formation of user groups for different resources/assets created as well as through other village level organizations. In-built system and mechanism will be developed for qualitative growth and dynamism of the organizations. The community organizations will be linked to other Government and Non Government institutes of interest. Therefore potential people's organizations would be formed in the project area viz watershed level organization and users groups.

10.4.1 Watershed level committee

Watershed level organization viz; water and watershed management committees will be established right from the beginning of the project. The overall planning, co ordination, management and maintenance are possible through this representative body. This clearly implies representation from different sections of the community – landholders and landless, men and women, thus bringing people from all section of the society, gram panchayat and other existing political or non political organizations.

10.4.2 User Groups (UGs) and Self Help Groups (SHGs)

Few other categories of institutions are formed of various groups with common areas of interest in the project area. These include, depending upon necessity, SHGs of women and men, UGs for common assets, etc. The capacities of different groups will be developed from time to time for effective functioning of the groups. A mechanism will be developed to ensure continuity, both in learning, functioning and actions that form responsibilities of such groups during the implementation project activities.
